MEET **FACTS**

TEAM

Tamer Farag
Facts CEO

International MENA ambassador to IHRSA, IDEA, & FIBO, For the last 30 years Tamer succeed to inspire the fitness industry starting from being certified personal trainer for 15 years (1990 to 2005), then moved to management from 2005 to till now. in 2010 Tamer establish first stand alone fitness academy in Egypt and MENA region (FACTS Academy). Tamer have more than 50 certificate as athlete, Trainer, manager, consultant, plus master degree in Business administration from Fitchburg University, USA.

Dr. Kareem Zahran
Exercise science director

Registered Egyptian physiotherapist, ACSM certified personal trainer, Kareem is the developer, editor of fitness personal training programs and touter in FACTS Academy. for the last 10 years Kareem teaches exercise science for fitness and athletic trainers, instructors, and sports enthusiastic who are looking for best understanding about human body systems and how it interacts.

Dr. Islam Ibrahim
Educational instructor

Registered Egyptian Physiotherapist, DPT in sports medicine (in progress) ACE certified personal trainer, Islam is one of the developer and editor of GFI study material taught at FACTS academy as well as lecturer of exercise science and personal training courses for last two years. Islam also working in sports rehabilitation for almost 5 years, helping athletes and individual in injury prevention and sports injuries rehabilitation.

Abd Alrahman Bahrawy
Educational Advisor

Graduated from faculty if applied science, certified fitness trainer by national board of fitness Examiners and ACE certified fitness trainer , works at FACTS academy as educational advisor helping athletes and professional trainers through their educational path

Vlada Petrova
Marketing Specialist

Bachelor of business management by Moscow University of Finance and Law, HISTES certified digital marketer, NASM certified nutrition coach (in progress). 8+ years in customer experience sector, 4 years in marketing. Passionate about wellness & business development, administrates the academy social media channels.

Welcome to FIT FACTS magazine , the official magazine for FACTS academy (Fitness Academy for Consultancy, Training and Services), with it's monthly digital and online magazine you will be updated with the latest sports, health&fitness news, trends, knowledge , openings as well as the industry leaders who develop the fitness industry in Egypt and MENA region.

If you're looking for a fitness profession , see yourself in management position , relocating to a closer club to your home or even a club owner/operator searching for a team to work for different departments, FIT FACTS will help you to do so . FACTS vision is to " Develop the fitness industry in the MENA region" and FACTS mission is to "sparkle the pathway for fitness enthusiasts through knowledge, skills and attitude(KSA)", through our vision and mission we're aiming to deliver the maximum benefits for you and your club and help our Arab world to reach its health and fitness goals.

We wish you to enjoy our monthly issue of FIT FACTS magazine and it's content, and if you like to download this issue please visit our website.
(www.factsacademy.com/magazine)

Dr. Silvia Mamdouh
Magazine Editor

Registered Egyptian physiotherapist, DPT in sports medicine (in progress), NASM certified nutrition coach. Silvia is one of the developer, editor of academic materials taught in FACTS Academy as well as FIT-FACTS magazine editor for the last two years. Silivia also coordinate all academic aspects for FACTS students to make sure they are graduate smoothly.

Hossam Hussein
Layout & Art director

Bachelor of Arts, Department of Mass Communication, Ain Shams University. Certified adobe photoshop, indesign, illustrator, after effect, premiere, and final cut. Hossam is one of the developer FIT-FACTS magazine and Designer and art director, and social Media designer, video editor and maker.

SPICE UP
YOUR SUMMER
WITH THESE
5 FUN
WORKOUTS

Softball leagues, beach volleyball, tennis, paddle boarding, kickball, recreational flag football, swimming ... there's no shortage of outdoor activities to help you stay active during the summer months. And while you may participate recreationally (volleyball in the pool with a margarita in your hand, sound familiar?) the right activities can turn fun in the sun into a full-body workout. We've compiled a list of trendy workouts on our radar this summer — and broken them down by the type of person they'll appeal to, what muscles you'll work, and the results you can expect to see from each. Here are our top five picks for popular summer workouts that you may want to consider:

SWIMMING, try it if you have knee or joint pain; hate to sweat; are looking for low-impact cardio options, Swimming is perfect for beginners who need to use a noodle all the way up to advanced swimmers. Swimming is a full-body workout without the sweat and grunting! You can expect to work the arms, back, legs, glutes and core. It's also a great cardiovascular workout and can be

sped up or slowed down to meet you at your fitness level. Results include improved breath control, enhanced cardio endurance, increased lung capacity, and full-body muscle toning. You can actually swim daily as a workout because swimming recreationally isn't as intense as swimming speedy laps or doing water

drills — and is easier on your joints than cardio

fast you swim. A 155-pound person who swims for 30 minutes quickly will burn about 250 calories; a person who swims faster can burn up to 350 calories in 30 minutes.

BEACH VOLLEYBALL, you can give it a try if you're a couch potato who needs motivation; or an athlete looking for a new

sport; can't sit still at the beach. Volleyball traditionally works the legs, arms and core.

Don't expect to get a chiseled body from playing beach volleyball a few times a week. Because this is traditionally a six-member team sport, you won't get in much cardio covering a small area of the court. Instead, expect to get stronger in your legs and a little more definition in your arms and upper back. However, the calorie burn for beach volleyball is substantially larger than playing the same sport indoors. According to Harvard Health Publications, 30 minutes of recreational volleyball indoors burns almost 140 calories. But in the sand, the calorie burn is around 350 calories!

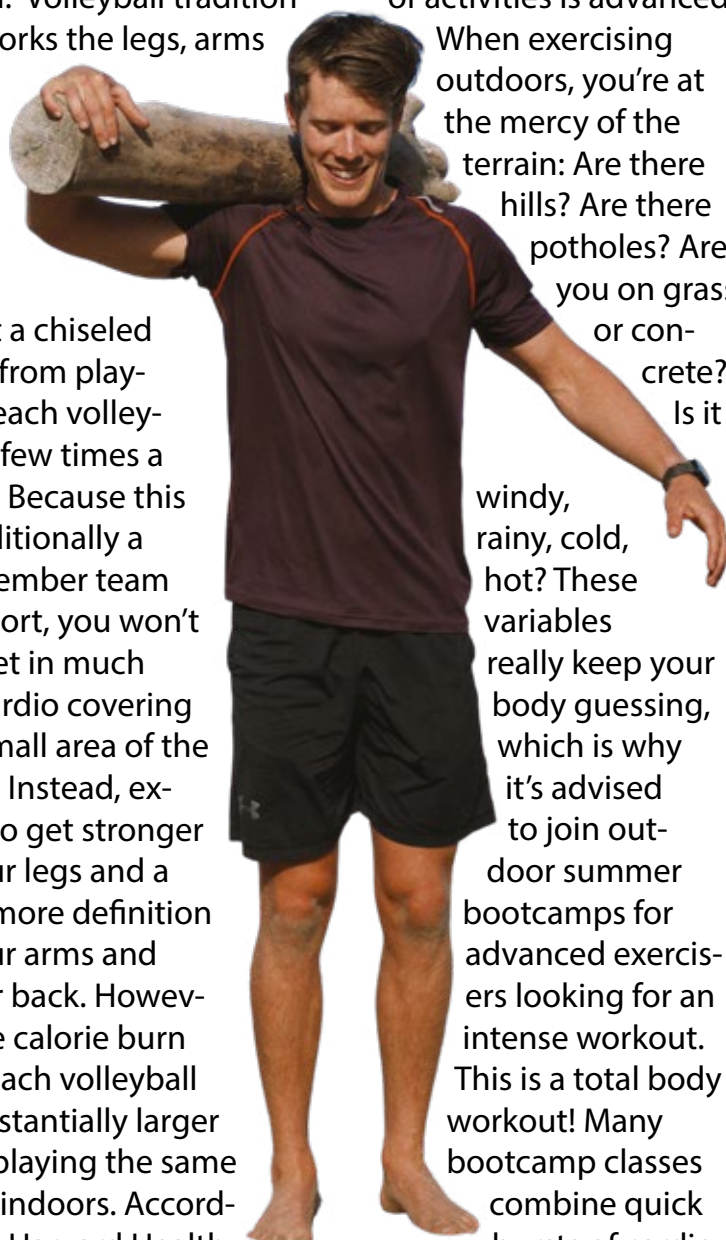

OUTDOOR BOOT CAMP

try it if you love high-intensity workouts; have plateaued and want to jump-start your fitness results; like group fitness, but hate the gym. Fitness

level needed for this kind of activities is advanced.

When exercising outdoors, you're at the mercy of the terrain: Are there hills? Are there potholes? Are you on grass or concrete? Is it

windy, rainy, cold, hot? These variables really keep your body guessing, which is why it's advised to join outdoor summer bootcamps for advanced exercisers looking for an intense workout. This is a total body workout! Many bootcamp classes combine quick bursts of cardio with strength training (like in a HIIT workout). You'll work your legs, glutes, core, arms and back and everything in between! Expect to see weight loss, improved muscle mass, a smaller waist, stronger legs, and toned arms as a result of doing this workout. Plus, according to the American Council of Exercise, in a traditional bootcamp class you'll burn almost 10 calories a minute! Take that bootcamp outside on uneven pavement or grass with factors like the wind

potentially making cardio and plyometric movements more challenging, and you could be burning even more than 300 calories in a 30-minute class.

PICKLEBALL, Try it if you like tennis or badminton; enjoy team sports that require strategy, teamwork and fast-paced movements. It's suitable for everyone! From someone who has never picked up a racket to a more

serious tennis competitor. If you're new to the sport, or just getting back into fitness, join at a recreational level where the competition will be less intense and you can move a little slower on the court. This type of sport requires plyometrics — quick short movements to carry you from one spot to another — plus engages the arms, providing a total-body workout. Remember that playing a sport like pickleball, especially if you're a newbie, can require some recovery time after each session. You'll be using muscles and moving your body in a way that you're not used to. So start with once a week and build up to 3

or 4 times per week. If you play for at least an hour a day, you can count this as a strength and cardio workout wrapped into one! You'll gain more strength in your ankle, knee and hip joints as well as your shoulders due to the short and quick movements during each game.

STAND-UP PADDLE BOARD YOGA

(SUP), you will have a great time if you're enjoy boating, kayaking or being by the water; are a yogi looking for a challenge; want a mindful exercise option; need a low-impact workout, it's required level of fitness is intermediate yogi. It's helpful to have gone to at least a few yoga classes so that you don't have to learn what a basic yoga pose looks like while wobbling on your board on the water. Since you have to focus

on balance, environmental factors, and following along with the routine, having a few classes under your belt on land will help you feel more at ease on the board. On a paddle board

you're forced to modify your traditional yoga practice — and due to the waves and wind, no practice will be performed in truly identical conditions. The variance in environment is good for someone who wants to "go with the flow" and keep their body guessing. Your stabilizing muscles will really be firing since your center of gravity is rooted down through your core.

The results are Improved balance and focus can be expected to be gained through this workout. Doing this class three times a week would be more than enough to see progress this summer: You'll see improved muscle tone and definition, as well as build muscle, which helps burn fat.

Whatever summer sport or outdoor workout you decide to try, remember that the one you'll stick with is the one you enjoy the most. More than any other time of year, summer really allows us to have fun while exercising, so try a few activities until you find one that resonates with you. You may be surprised at the results you see from having a little fun in the sun.

FACTS OR FICTION

In a traditional bootcamp class you'll burn almost 10 calories a minute, and you could be burning even more than 300 calories in a ~30minute class.

If you find this information a Fact or Fiction, email us with Fact or FICTION on (magazine@factsacademy.com) and receive %10 discount on the upcoming CFT (certified fitness trainer) course from FACTS.

BINGE EATING?!

HERE'RE 6 WAYS TO BEAT IT!

Binge eating disorder (BED) is the most common eating disorder. It is a mental health condition characterized by recurrent episodes of bingeing (consuming large amounts of food), a feeling of loss of control during the binge, and guilt or shame afterward.

If left untreated, BED can lead to obesity, which is associated with other serious health problems, including type 2 diabetes, heart disease, and gallbladder disease. BED is typically treated with psychotherapy, nutritional counseling, and medications. Lifestyle strategies can also prevent binge eating. It's important to note that these strategies are not substitutes for professional BED treatment, but they can be used alongside professional treatment.

TIP 1: Stop Restricting Yourself

If you diet with extreme restrictions on your food intake, your body may respond by overeating later. Some diets promise a way to lose weight quickly and implement intense guidelines (such as cutting off entire food groups or only drinking juices for a week). Extreme diets are not sustainable in the long run. If you stay away from food that you love or that your body needs, your cravings will increase and you might later consume a large amount of the food you didn't let yourself eat. Stay away from any diet that includes a promise of fast weight loss, grouping foods into the "bad" category, elimination of whole food groups, like carbohydrates, the claims of no need to exercise or rigid menus and limited food choices.

Instead of participating in unhealthy, fast-acting diets, look into making healthier choices within your meals. For example, choose lower-calorie salad dressings that you like, rather than suffering through a type you don't enjoy. And be aware of your own habits, for example, if you tend to overeat while watching television, turn off the TV when you eat.

TIP 2: Don't Skip Meals

Skipping meals is another factor that can exacerbate binge eating. Similar to restricting your calories through a diet, skipping meals can leave you wanting to eat more later and increase your likelihood to binge eat. Incorporating a regular eating pattern into your routine has been shown to reduce the chances of binge eating later on in the day. If you start skipping meals, you'll begin to crave more. By skipping daytime meals and restricting calories, many people find themselves binge eating late into the night.

Breakfast jumpstarts your metabolism and provides you with energy for the rest of the day. Consider eating a high-protein meal in the morning so that you'll be less likely to become hungry. Eggs, almonds, chicken breast, oats.

TIP 3: Stay Hydrated

Staying hydrated has many benefits, but it can also help curb unwanted cravings and reduce overeating. In one study, 24 adults who drank 17 ounces before eating consumed fewer calories than people who did not drink water before a meal. Water can also boost metabolism and may contribute to weight loss.

TIP 4: Eat Your Fiber

Eating unprocessed foods, whole grains, fruits, and vegetables can help you feel full and potentially moderate your compulsive eating. Fiber moves slowly through the digestive tract, keeping you feeling satiated longer, and may cut down on food cravings. Most fruits, vegetables, and whole grains are rich in fiber. Fiber-rich foods help control cholesterol, blood sugar, and reduce the risks of diabetes and heart disease, examples include avocados, bananas, blueberries, Brussel sprouts, carrots, chickpeas

TIP 6: Practice Intuitive Eating

Intuitive eating means eating when you feel hungry and stopping once you are full. It involves giving yourself unconditional permission to eat, but with curiosity and no judgment. We are all born with the ability to eat when we are hungry and to stop when we are full—but many of us lose that intuition about eating for a variety of reasons as we grow up. Intuitive eating is about trusting your body to make good choices around food and reclaiming that ability. Becoming aware of what you eat through intuitive eating and regaining your natural relationship with food can help control compulsive eating. One study that followed patients for eight years found that intuitive eating was associated with lower odds of binge eating. Intuitive eating is also linked to better psychological health. In the same study, people who engaged in intuitive eating were also less likely to have depressive symptoms, low self-esteem, body dissatisfaction, unhealthy weight control behaviors (e.g., fasting, skipping meals), and extreme weight control behaviors (e.g., taking diet pills, vomiting).

TIP 5: Exercise and Relax

Stress can trigger binge eating, and exercising often reduces stress levels. A small study showed that aerobic activity significantly reduces binge eating episodes in the long term. Simply taking a 30-minute walk, riding your bike, dancing, or swimming can help prevent binge eating. Yoga is another type of exercise that has been shown to reduce binge eating. In addition to exercise, practicing mindfulness, participating in breathing exercises, and enhancing your mind-body connection can promote relaxation and reduce stress eating.

The 10 principles of intuitive eating include

- 1. Reject the diet mentality**
- 2. Honor your hunger**
- 3. Make peace with food**
- 4. Challenge the food police**
- 5. Discover the satisfaction factor**
- 6. Feel your fullness**
- 7. Cope with your emotions with kindness**
- 8. Respect your body**
- 9. Movement**
- 10. Honor your health with gentle nutrition**

FACTS OR FICTION

Signs of an eating disorder that needs treatment include binge eating, concern or embarrassment about eating behaviors, secretive eating habits, preoccupation with weight or body image as well as an unhealthy body weight because of eating problems.

GLUTATHIONE

BENEFITS FOR ATHLETIC PERFORMANCE AND RECOVERY

Glutathione as you may know, is a molecule that your body makes inside every single cell. And some cells have a whole lot more than others. Within 10 minutes of doing aerobic activity, the amount of glutathione in your muscle cells (the cells that you're exercising) goes down by about 40%. There are 4 primary things that glutathione does within the cell that are critical for cellular functioning, cellular vitality & health:

It's the primary anti oxidant inside of every cell you make and you make it yourself, the primary anti inflammatory of every single cell in your body, the primary detoxifier of the cells in your body. Also it directly supports the production of ATP which are the energy packets that every cell uses for all of its functioning.

Aerobic vs Anaerobic Athletic Activity

If you're a long distance runner, a marathon runner or a triathlete, most of what you're doing is aerobic activity. There will be small bursts of anaerobic activity but by and large these are endurance based activities. There's also anaerobic exercise – that means without oxygen. Anaerobic is typically very short bursts of activity – less than 2 minutes. For example a weight lifter would be involved in anaerobic activity while they are lifting the weights. A short sprinter would also be involved in anaerobic activity if the sprint is less than 2 minutes in length.

During anaerobic activity – even if you're doing long distance running, part of what happens is you build up lactic acid. And that's a little different than the free radicals that are produced during normal aerobic activity. If you've done a lot of endurance activities, you're probably aware that lactic acid builds up in the muscles and can cause a lot of pain, and it also has to be flushed from the body. Glutathione does not play a direct role with the lactic acid, its role is in helping diminish the inflammation within the cell that occurred from the production of lactic acid.

So in the aerobic metabolic pathway, glutathione plays a huge role in recovery and endurance. In the anaerobic part because its such a short burst, the glutathione will clean up the mess afterwards, but it's not as critical as during endurance activity.

The Role of ATP During Athletic Performance

During the actual muscle work, whether you're running, lifting weights or whatever you're doing, the job of the cell is to produce ATP and glutathione in that part of the process will be critical to maintain the ATP production. If you're involved in exercise, you have many mitochondria making lots of ATP and if you don't have adequate glutathione inside those cells, the mitochondria will slow down its ATP production so that it doesn't kill itself. So if your glutathione levels are lower, you will find that your endurance is also lower.

During the process of athletic activity, you increase the amount of free radicals within your cells dramatically. When you increase free radicals, you will also increase inflammation within the cell. Not a whole lot of toxins necessarily that are being dealt with at the time of aerobic activity, certainly not more than what the cells might have had to begin with but ATP production is a big issue. Because the more you're working that cell the more the demand for the ATP, the more ATP that is made, the more the glutathione needs to be there to clean up the reactive oxygen species that are spun out as we make ATP. How Does Glutathione Help the Recovery Phase Of Exercise?

After exercise part of what has to happen aside from decreasing inflammation and cleaning up the environment, but you also will have some muscle cell remodeling and strengthening that involves protein, and the linking of the amino acids together to make the different proteins in your cells is also very much a

part of the general function of glutathione.

In the recovery phase, the cells are now at rest or certainly not being pushed as hard as during the exercise phase. This is the point where the cell is then trying to recover itself and make sure that it has optimal vitality.

If you look at the function of glutathione within the cell, it will do a clean up. It will clean up the reactive oxygen species and there's other antioxidants that will help it. The other ones that you make yourself like catalase and superoxide dismutase and coenzyme Q10 and then the

Supplement Facts	
Serving Size 1 Vcap®	
Servings Per Container 60	
Each capsule contains:	Daily dose
Glutathione (Reduced Form)	500 mg
Milk Thistle Extract (Silybum marianum) (Standardized to min. 80% Silymarin) (Seed/fruit)	100 mg
Alpha Lipoic Acid	50 mg
* Percent daily values are based on a 2000 calorie diet	
† Daily Value not established	

ones that you might consume in your diet, either because you ate food that was rich in antioxidants or you used a supplement that was rich in additional antioxidants.

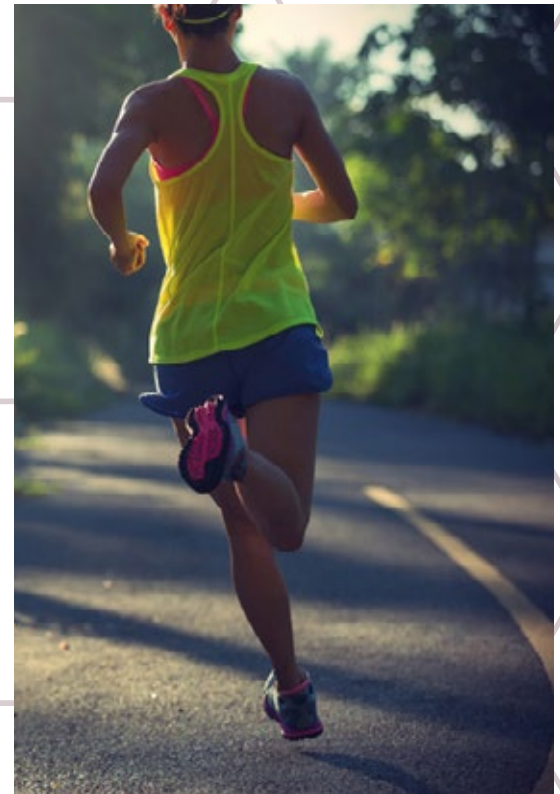

Hydration of course is critical, because you're trying to flush from your body the toxins that are being metabolized out of your cells. And any kind of acids that have built up from the athletic activity.

What trained athletes says after starting to raise their glutathione levels ?

• "My stamina is better, my strength is better and my recovery was massively shortened."

• "I didn't have the stiffness, the soreness, the inability to go do it again the next day that I normally would experience."

Highly trained athletes are really tuned into their bodies, as they do a lot of things to support the health of their muscles. So for them to have that kind of experience, it makes the

rest of us wonder what's going on. And it comes right back to decreasing inflammation within the cells – post exercise. That's where glutathione fits in very nicely. Recommended dosing of glutathione

When taking orally, It's recommended to take from 750 to 1000 mg once daily , when taking as IV or intramuscular injection, doses of 1.5 to 3 grams/m2 of glutathione have is giving once weekly but medical advice of needed to determine the exact dose needed for your body.

FACTS OR FICTION

Glutathione is the primary anti inflammatory of every single cell in your body.

If you find this information correct or false, email us with TRUTH or FICTION on (magazine@factsacademy.com) and receive %10 discount on the upcoming CNS (certified nutrition specialist) course from FACTS.

FACTS

TOUGH TIMES DON'T LAST, TOUGH TEAMS DO

HAPPY 10TH ANNIVERSARY

Protect Your Hair From Chlorine, Salt & More

SUMMER AND SWIMMING GO HAND-IN-HAND, AND NOT JUST FOR THOSE WHO LIVE ON THE COAST. WHILE BEACH DAYS ARE AN INTEGRAL PART OF SUMMER HOLIDAYS, SWIMMING POOLS ARE A POPULAR HANG-OUT AS WELL.

Have you noticed that your hair becomes drier, more fragile and dull during summer? While swimming is great exercise and a fun way of cooling down, for many of us, it wreaks havoc on our hair.

The biggest problem sea water causes is dehydration. Our hair's water content is what makes it elastic and moisturized. When the hair's natural moisture is lost by evaporation, dehydration occurs. Because of its high salt content, salt water is naturally osmotic, meaning it draws moisture out of your hair. This can result in dry, dehydrated or brittle hair. Salt water is also known to be particularly cruel on hair color. Chlorine, often used in swimming pools, isn't much kinder. A powerful anti-bacterial agent, it excels at keeping nasty germs and bacteria out of the water

BUT STRIPS THE HAIR AND THE SKIN OF ITS NATURAL OILS, WHICH CAN RESULT IN DRYNESS AND DULLNESS.

It also has a nasty habit of giving blonde hair a green tinge and fading darker hair colors. Luckily, not all is lost – there are small precautions you can take to protect your hair from the effects of the sea and the swimming pool. Here's how.

Soak your hair in fresh water before you go swimming. Your hair can only absorb so much water, so if it's saturated with fresh water before you get into the pool, it won't be able to absorb much chlorine or sea water, meaning less damage! Leave-in

"Keep a leave-in conditioner in your beach bag and apply it regularly."

conditioners keep hair soft and moist, making it more difficult for sea water to penetrate the hair shaft. A spray formula is a practical choice for the beach. It's recommended to use Coconut Oil De-tangling Leave-In Conditioner as it's enriched with coconut oil and shea butter, to restore moisture to dry, damaged hair and help reduce split ends and breakage.

Shower as soon as you're done swimming. The best way to avoid chlorine-induced damage is to wash the chlorine out of your hair as soon as possible. But don't use a harsh shampoo to get rid of it, as this could make matters worse. Use a gentle shampoo that cleanses thoroughly without stripping the hair of any moisture. Use a deep conditioner. Exposure to sea water and chlorine means your hair might need something more than just your usual conditioner. Apply a deep conditioner regularly, and be sure to use it correctly to reap the full hydrating and moisturizing benefits (yes, that means keeping it on for the full time stipulated on the label!). If you're blonde, opt for blonde-specific hair care products. This will help prevent chlorine from altering your hair color and minimize the color fading. Try Touch Of Silver Brightening Shampoo which brightens hair color in just one wash. Formulated with a unique mix of violet and blue pigments, this purple shampoo restores your hair color by removing yellow and orange brassy tones, while optical brighteners add shine. If you're not planning to put your head under the water, tie your hair in a bun and secure it on top of your

head – this will minimize exposure to the water.

Reduce Hot Tool Use, Step away from your blow dryer, straightener, curler, or any other hot tool this summer (and all the time). Your hot tool used in combo with your summer swimming will seriously dry out your hair and leave it with major breakage and split ends.

Try a Swim Cap, The swim cap may not be for everyone, but they are a great way to protect your hair. A swim cap will help your hair not come in contact with the water you are swimming in. But if you feel swim cap is not for you? What about a hat? Wearing a wide brim hat will not only help protect your face and neck, but it will also keep your scalp out of the harsh sun. **Avoid the Big Chop,** It seems to make sense to cut your hair dur-

ing the summertime but it isn't the best idea for your hair. Hair needs to be longer and heavier in the summer to deal with humidity and the stress from the salt, chlorine, and the sun. So maybe hold off on the cute bob you've been eyeing until summer has ended.

FACTS OR FICTION

Chlorine is one of the harshest chemicals your hair encounters in the summer. When your hair is exposed to chlorine, it is stripped of its natural oils, and can cause your hair cuticles to break.

If you find this information correct or false, email us with FACT or FICTION on (imagine@factsacademy.com) and receive %10 discount on the upcoming CSS (certified SPA specialist) course from FACTS.

GET READY FOR WATER SKIING

In the spirit of outdoor activity and putting the fun in fitness, here's some great information and exercises that will improve your water-skiing. Prefer the colder cousin to water skiing, downhill skiing? No problem! This article focuses on strengthening your skiing skills and while we created

it with water in mind, the tips are definitely applicable to improving your downhill form.

As anyone who has tried it knows, water-skiing is more complicated than standing up and holding onto a rope! It's a sport of skill and strength, and requires many muscle movements to do it right and

comfortably. When getting ready to hit the water, focus on developing these key areas while in the gym (we don't want unauthorized splits with those skis on!): leg stability, inner thighs, back, core and forearms. With a little extra attention, you'll find you're able to get out of the water easier,

WATER SKIING TIPS..

If you're not a water skier, know that it's a great, challenging workout that's worth a try. Water sports like water-skiing and wakeboarding are a great way to get out in nature on a beautiful day, and some of the best workouts you can do! Besides, when else do you get to travel right on the surface of the water at a pace of 15 MPH?

When you start out as a water skier, you can either do a dock start or a deep water start. For a dock start, you start at the end of the dock holding the ski rope, and get pulled by the driver from there. For a deep water start, the boat driver will bring the boat to the center of the lake, then help you get set up in the water with the ski rope. For first time skier students, it's usually best to start from the dock, as it can be difficult to get skis on your feet in deep water! Another recommendation for first time students is to use trainer skis. One of the harder parts about skiing is keeping both skis up and in a straight line against the forces of the water and boat driver. Trainer skis have a small piece of rope or plastic at the tip of the skis that keep them together. This takes pressure off the skier, who already has a lot to think about when they're focused on getting up! Trainer skis are popular for kids, but there's no shame in using them to start.

feel more stable cutting in and out of the wake up your speed by a few MPH and prolong that beautiful ride by minutes, not seconds. And for people who don't think they're water skiers, maybe this article will convince you otherwise!

As any ski instructor will tell their students, getting up is the hardest part of water skiing, and there are a lot of important things to remember in the moment. Remember that practice makes perfect, and most people will fall a bit before they get it right! Learning to ski can feel like a vicious cycle of falls, but when you have energy and muscle strength on your side, you'll pop up in no time! Make sure you dig your heels in, point the skis straight forward (trainer skis help with this), keep your elbows in and your hands tight on the rope handle. You'll want to keep your head and eyes looking up, and let your body handle the rest. It's important to make sure your feet are tight in the bindings – your toes should be cushioned in. And of course,

it's absolutely crucial that you wear a life jacket, no matter how talented of a skier you are. Here's some important information: Being a water skier is as much in your head and mind as it is in your muscles. It doesn't matter how much you work out on solid ground: It's not easy to be pulled on a handle, behind a boat, in any direction the driver chooses, wearing no gear except a life jacket, at a speed of 15-20 MPH. For most people, kids or adults, it's not exactly a natural thing! That's where your mind comes in. Skiing can deplete your energy quickly, but if you're in the right mindset and enjoying yourself, you can take your ski run from seconds to minutes, and get a great workout in. Just make sure that if you feel major pain outside of

muscle exertion at any point, you stop. You don't want to wake up with stiff joints and an injury the next morning!

WATER SKIING STRENGTH.

The sport of water skiing requires maximum output from the muscles throughout your entire body, so water skiers will want to focus on training their core muscles, lower body and upper body strength. In addition to a strong core and body, you also want to think about grip strength and endurance. Unlike most workouts, like cardio or powerlifting, waterskiing requires you to hold the same slightly-sitting position. Of course, you'll shift your posture slightly if you encounter waves, or if your driver makes a sudden turn, but your stabilizer muscles and abs will mostly just be holding you in place. That's why strong legs, strong core muscles and a strong upper body are all so important!

Here are some basic exercises to help you strengthen all of those areas and get your muscles and joints in shape for the slopes—the water ski slopes of course! It's recommended that all water ski students cycle through these exercises in whatever order you like, with 8-12 repetitions of each exercise, 2-3 times per week!

INNER THIGHS: Your legs will bear your weight as you stand upright on the water. Strengthening them will make your ride longer and far more enjoyable!

LATERAL LUNGES: Make sure to keep one leg straight and focus on sitting back on your hip. Weights are not necessary, but adding small or large weights – whatever size works for you – is a great way to increase intensity and burn extra calories. You can always start with body weight and add weights next time.

BACK: Your back and your core work together to keep you stabilized while you ski.

SINGLE ARM STANDING

ROWS: This exercise is a great way to build strength and stability at the same time. Use whatever size weights you're comfortable with, and make sure you keep your elbow at a 90-degree angle when you drive the dumbbells back!

CORE: Simple crunches just won't put enough pressure on your abs to give you the core strength you need for a sport — that's a fact. Focus on the kind of movements that require strong force from your core while standing on the ground. These can help burn more calories because you're engaging your total body, not just your abs.

ANTI-ROTATION OVERHEAD

PRESS: Start with the band pressed into your chest and push up while keeping your core engaged. Make sure to keep a straight vertical line while pushing up.

SIDE PLANKS WITH A ROW:

This movement is another great core strength exercise. We also recommend pull-ups, if that's in your fitness wheelhouse!

FOREARMS: While working all of these muscles, it's easy to forget the simple things that apply to water-skiing, like HOLDING ON!

DUMBBELL FARMER'S

WALKS: Hold heavy dumbbells or kettlebells by your side, keep your back straight, and WALK! Done deal. We recommend starting with 10lb weights and adding weight accordingly.

FACTS OR FICTION

Water skiing is an Olympic sport. If you find this information a Fact or Fiction, email us with Fact or FICTION on (magazine@factsacademy.com) and receive %10 discount on the upcoming CFT (certified fitness trainer) course from FACTS.

IMPROVE YOUR SHOULDER MOBILITY WITH

10 EXERCISES

Whether you have tightness in your shoulders, are recovering from an injury, or simply want to boost the strength of your shoulder muscles, there are specific stretches and exercises that can be especially beneficial. Including shoulder-specific exercises and stretches in your overall workout program may help increase your shoulder mobility and flexibility. These movements may also build strength in your shoulders, improve your shoulder function, and prevent injury.

MOBILITY VS. FLEXIBILITY

Mobility and flexibility are often used interchangeably, but they're not the same thing.

Flexibility refers to the muscle's ability to lengthen. Mobility, on the other hand, is the ability of the joint to move through its full range of motion. While they both

refer to the overall range of motion in the shoulder, it's important to know where the limitation is coming from.

SHOULDER MOBILITY EXERCISES

Before you do any of these exercises, spend 5 to 10 minutes warming up with dynamic upper body stretches such as arm circles, arm swings, and

spinal rotations. "Warming up this way is great for increasing blood flow to a specific area, which also helps with overall performance." If you're recovering from a shoulder injury or surgery, work with a physical therapist who can help you do the right exercises and stretches for your condition.

1 STANDING ARMSWINGS

This is a great dynamic exercise that helps to increase blood flow to the shoulder joint. Doing this exercise as part of a warmup before performing upper body exercises can improve mobility and flexibility in your shoulders and upper back.

To do this exercise:

1. Stand tall with your arms by your sides.
2. Engage your core and swing your arms forward until they're as high as you can go. Make sure you don't raise your shoulders.
3. Return your arms to the starting position and repeat.
4. Do this movement for 30 to 60 seconds.

2 SHOULDER PASS-THROUGH

The shoulder pass-through exercise helps to increase joint mobility while still engaging the surrounding muscles of the shoulder. This exercise requires a holding a long stick, like a broomstick or PVC pipe.

To do this exercise:

1. Stand with your feet shoulder-width apart and your arms in front of your body.
2. Hold a stick, like a broomstick or PVC pipe, with an overhand grip. Your arms will be wider than shoulder-width. Make sure the stick or pipe is parallel to the floor.
3. Engage your core and slowly raise the broomstick or pipe above your head, keeping your arms straight. Only go as far as comfortable.
4. Hold the pose for a few seconds.
5. Return to the starting position.
6. Repeat 5 times.

3 HIGH-TO-LOW ROWS

high-to-low rows really challenge the upper back and thoracic muscles, which provide a lot of stability to the shoulder joint. This exercise requires a resistance band. You can also do this exercise at the gym using a cable machine.

To do this exercise:

1. Secure a resistance band to a sturdy above shoulder height.
2. Kneel down on one knee and grab the band with the opposite hand. The other hand can rest at your side.
3. Pull the band toward your body while keeping your torso and arm straight. Focus on squeezing the shoulder blades together.
4. Return to the starting position and repeat.
5. Do 2–3 sets of 10 repetitions on each side.

4 REVERSE FLY

Like the high-to-low rows, the reverse fly exercise targets the upper back and thoracic muscles that provide a lot of stability to the shoulder joint. This exercise requires a set of light dumbbells.

To do this exercise:

1. Hold a dumbbell in each hand.
2. Stand with your feet shoulder-width apart, knees slightly bent.
3. Engage your core and bend forward at the waist. Keep your back straight. Your arms will be extended.
4. Raise your arms away from your body. Focus on squeezing your shoulder blades together. Stop when you get to shoulder height.
5. Slowly return to the starting position and repeat.
6. Do 3 sets of 10 repetitions.

5 CROSS-ARM STRETCH

The cross-arm stretch targets the rotator cuff muscles. You should feel a good stretch in the rear shoulders.

To do this stretch:

1. Stand with your feet slightly less than shoulder-width apart and bring your right arm up to a little less than shoulder height.
2. Place your left hand on your right elbow and gently pull your right arm across your body using left hand to support your arm.
3. Hold this position for up to 30 seconds.
4. Repeat on the opposite side.
5. Do each side 3–5 times.

6 ROTATION WITH DUMBBELL

Rotation with a dumbbell allows you to warm up the shoulder for overhead and throwing motions. This is standard practice for most athletes who extend their arms overhead and externally rotate during their sport.

To do this exercise:

1. Stand with your feet shoulder-width apart while holding a light dumbbell in your right hand.
2. Raise your arm so your elbow is at shoulder height. The front of your hand will be facing the ground.
3. Rotate your shoulder to bring your arm and weight up so your hand is raised toward the ceiling.
4. Slowly return to the starting position and repeat before changing sides.
5. Do 2–3 sets of 12 repetitions on each arm.

7 SLEEPER STRETCH

This stretch is often recommended when dealing with a shoulder injury or during rehab. While you can do this stretch on both sides for general health, if you have an injury, the emphasis should be on the affected side.

To do this stretch:

1. Lie on the affected side. If you have no injury or pain, choose a side to start with. Your shoulder should be stacked underneath you.
2. Bring your elbow straight out from your shoulder and bend this arm, so your fingers are pointing toward the ceiling. This is the starting position.
3. Gently guide this arm toward the floor using the unaffected arm. Stop when you feel a stretch in the back of your affected shoulder.
4. Hold this position for up to 30 seconds.
5. Do 3 repetitions before changing sides.

8 DOORWAY STRETCH

The doorway stretch allows you to stretch each side of your chest individually, which helps if one side is tighter than the other. This stretch helps to open the pectoralis muscles in your chest and increases the range of motion in your shoulders. To do this stretch:

1. Stand in a doorway with elbows and arms forming a 90-degree angle. Your feet should be in a split stance.
2. Bring your right arm up to shoulder height and place your palm and forearm on the doorway.
3. Gently lean into the stretch, only going as far as comfortable.
4. Hold the stretch for up to 30 seconds.
5. Change sides and repeat. Perform on each side 2–3 times.

9 CHEST EXPANSION

Chest expansion is a good way to stretch your back muscles, open your chest, and increase range of motion in your shoulders.

To do this stretch:

1. Stand tall with your feet together.
2. Hold the end of a towel or exercise band in each hand, with your arms behind your body.
3. Use the towel or band to help move your shoulder blades together and open your chest. This will cause you to look toward the ceiling.
4. Hold this pose for up to 30 seconds.
5. Repeat 3–5 times.

10 CHILD'S POSE

Commonly known as a yoga move, Child's Pose is a good way to open the shoulder joint into flexion (forward bending) and to stretch your latissimus dorsi, or lat, muscles. Your lower back can also benefit from this pose.

To do this stretch:

1. Kneel on an exercise mat. Make sure your body is upright.
2. Slowly crawl your hands forward until your arms are extended in front of you. Keep your gaze downward.
3. Lower your torso onto your thighs and your forehead on the ground.
4. Hold this position while taking three deep breaths.
5. Repeat 3–5 times.

FACTS OR FICTION

FACTS OR FICTION?

The more mobility you have in your shoulders, the more injuries you can get during exercising.

YOUR GUIDE TO BUOYANCY AIDS

WHAT IS A BUOYANCY AID?

BUOYANCY AIDS, ALSO KNOWN AS A PERSONAL FLOTATION DEVICE (PFD), ARE NOW USED MOST COMMONLY BY WATER SPORTS ATHLETES LIKE KAYAKERS AND CANOEISTS, AS WELL AS WATER SKIING. THEY ARE DESIGNED AS A FLOTATION AID, RATHER THAN A LIFE-SAVING DEVICE. FOR ALL WATER SPORTS AND SAILING BUOYANCY AIDS ARE DESIGNED WITH MOBILITY IN MIND.

A BUOYANCY AID THAT DOES NOT FIT PROPERLY CAN RESTRICT THE ATHLETE'S RANGE OF MOVEMENT, WHICH COULD CAUSE THEM TO TIRE EASILY OR PREVENT THEM FROM USING AN EFFECTIVE TECHNIQUE.

BUOYANCY AIDS ARE MADE WITH A FOAM CORE, INSTEAD OF BEING INFLATABLE LIKE SOME LIFE JACKETS. THEY TYPICALLY HAVE FRONT AND BACK FOAM PANEL, AND GENERALLY MINIMAL FOAM AROUND THE SIDES TO ALLOW FOR BETTER FREEDOM OF MOVEMENT WHILE PADDLING.

USING FOAM REMOVES THE POSSIBILITY OF THEM BURSTING, OR NOT BEING INFLATED IN AN EMERGENCY SITUATION. THE TYPE OF FOAM USED IS TYPICALLY CLOSED CELL PVC (POLYVINYL CHLORIDE), ALTHOUGH SOME MANUFACTURERS ARE STARTING TO USE LESS TOXIC AND MORE RECYCLABLE MATERIALS.

MOST BUOYANCY AIDS FALL INTO ONE OF THREE DESIGN CATEGORIES:

- Over the head vest. Where the buoyancy aid is pulled on over the head. Usually worn in more extreme conditions like white water kayaking where you wouldn't want it to unzip at a crucial moment!
- Front zip jacket. Where the buoyancy aid is worn like a regular jacket and is zipped up at the front. Most commonly seen in recreational watersports, as they are lightweight and super easy to get on and off.
- Side zip jacket. A combination of the first two, with a smaller zip on the side allowing you to either wear over the head, or you can unzip it and take it off that way if required.

It is important to have a buoyancy aid that fits comfortably and allows you to move freely. Make sure the buoyancy you choose is suitable for what you are doing, and the environment you are using it in.

WHAT DOES THE N NUMBER MEAN?

Every jacket will be tested and rated. Often the larger the size the higher the floatation capable due to the added foam. The (N) newton is a measurement of force, measuring the amount of up lift generated by the buoyancy aid. The higher the number the more floatation. Most adult buoyancy aids range between 50N-70N depending on the size and intended use.

HOW LONG WILL A BUOYANCY AID LAST?

The foam used in buoyancy aids will degrade with age. A rough life expectancy is three years of use, but bear in mind that buoyancy aids which are often exposed to polluted water, wet storage, multiple impacts, and extreme temperatures may degrade faster than normally expected. Buoyancy aid and personal flotation devices need regular and routine inspection of any belts, stitching and other parts. This wear and damage serve as valuable indicators on when to retire a buoyancy aid.

All buoyancy aids include some form of adjustment strap for tightening the buoyancy aid, so it won't come off in the water. Generally speaking recreational buoyancy aids will have one or two adjustments as they are only intended for use in sheltered and calm conditions. More adjustments will be found on white water or sea kayaking buoyancy aids where the conditions are tougher so security is key. They may also include pockets which are great for storing safety and rescue accessories (and the odd chocolate bar for emergencies!)

BUOYANCY AIDS OR LIFE JACKETS - WHAT'S THE DIFFERENCE?

Essentially buoyancy aids are designed to help you swim if you capsize for example, whereas a life jacket is designed to keep a person afloat without the need to swim. This point is important. A life jacket should keep someone afloat even if they are unconscious and should have a collar designed to keep the person's face clear of the water. They are ideal for non-swimmers. However, you can get different types of life jackets. Some will not keep a person afloat in rough conditions nor if the person is wearing lots of clothes.

FACTS OR FICTION

Not all buoyancy aid fit for everyone, you need to choose a buoyancy aid that is appropriate for your body weight plus the weight of your clothes.

If you find this information correct or false, email us with FACT or FICTION on (magazine@factsacademy.com) and receive %10 discount on the upcoming CFT (certified fitness trainer) course from FACTS

9 HEALTH BENEFITS OF SUP YOGA

STAND UP PADDLEBOARD (SUP) YOGA IS A UNIQUE COMBINATION OF TWO DIFFERENT TYPES OF WORKOUTS. SUP YOGA COMBINES PADDLE BOARDING WITH YOGA, BOTH OF WHICH ARE GREAT WORKOUTS IN THEIR OWN RIGHT. WHAT EXACTLY IS SUP YOGA? IT IS SIMPLY DOING YOGA ON A PADDLE BOARD, WHILE FLOATING IN THE WATER.

BENEFITS OF SUP YOGA, There are many benefits to this exercise. Below are a few examples of the many benefits SUP Yoga has to offer. It isn't necessary to have a lot of experience with either yoga or paddle boarding in order to enjoy this workout. There are classes for beginners as well as those who are more advanced. Below are several reasons Stand Up Paddle Boarding yoga is a beneficial workout.

IMPROVES FLEXIBILITY, The various poses used in yoga improve flexibility and increase mobility. Paddle boarding also calls on a lot of different muscles and help to strengthen muscles. The two exercises combined offer a wide range of motion that works different areas of the body.

INCREASES CIRCULATION, An important part of yoga is focusing on breathing. This has been shown to increase circulation. Yoga also helps to reduce stress. Relaxation and stress reduction techniques help to improve circulation.

IMPROVES BALANCE, Yoga poses focus on improving and maintaining balance. SUP yoga works well for improving balance because it requires a lot of balance to stay on a floating board while doing yoga poses. Frequent workouts help improve balance.

GREAT CORE WORKOUT, Yoga poses that target the core area combines with the use of core muscles to stay afloat make for a great workout. The core muscles are very important when it comes to balance.

EMPOWERING, This is not an easy workout to complete. It takes hard work and patience as well as some skill. It is quite an accomplishment to be able to do these exercises.

REFINES YOGA TECHNIQUE, With yoga, as well as any exercise or sport, technique improves with practice. The added paddleboard challenge assists with refining as well as improving technique.

CALMING, The sense of floating on the water can have a calming affect, Yoga in itself is very relaxing and relieves stress. SUP yoga combines the peacefulness of the water with the stress reduction of regular yoga. The feeling of being close to nature by being out on the water also adds a calming effect to the workout.

FUN, Not only is this a great exercise for improving mobility and overall health, it is also very fun. Exercise should be enjoyable. People who enjoy their exercise program are more likely to stick with it and achieve better results. Yoga paddle boarding is certainly more fun being out on the water.

CHALLENGING, These workouts supply not only a physical challenge, but mental as well. It takes concentration and determination to balance on a board floating on the water while doing yoga poses.

THINGS TO CONSIDER..

Hydrate before the workout. It is always important to drink plenty of water when exercising. Because it is difficult to carry much on the paddle board and there won't keep things on the board during the workout, most hydrating will need to be done before and after the workout.

It is important to wear appropriate attire. Form-fitting clothing such as swimsuits may work best. It is important not to have clothing that is too loose on while doing yoga. During some of the poses, loose clothing can slide around and interfere with the workout. Also, it is a good idea not to wear jewelry and/or accessories such as hats or sunglasses because they will just get in the way.

Be prepared to get wet. Because this workout takes place on the water and requires a lot of balance, it should be expected that there is a possibility of getting wet. No matter the level of experience, anyone can fall off of the board and into the water.

Keep in mind that, due to weather, there is often a limited window of time to get the workout done. In order to get the best benefit from this workout, the waters need to be mostly calm. Getting the workout in may be tricky if there is a lot of wind or it is rainy.

FACTS OR FICTION

SUP yoga is not suitable for beginners and you have to be a professional to practice it.

If you find this information correct or false, email us with TRUTH or FICTION on (magazine@factsacademy.com) and receive %10 discount on the upcoming SPS (special population specialist) course from FACTS.

10 WAYS TO RETAIN EXISTING CLIENTS FOR GROWING YOUR BUSINESS

A strong and loyal membership base is great for business. If you take a look at your bank account, you will probably find that a significant chunk of your revenue comes from your membership fees. Of course, you may have additional streams of revenue like retail or personal training sessions but, in general, membership fees tend to form the basis of a gym. Member fees are an essential part of your gym's revenue and success.

75.9%

is the current retention rate
for fitness studios

glofox

Every year, the average health club will lose 40% of its members. You might think as members leave, new members will arrive, however, there is no guarantee that this will happen. Therefore, it's absolutely crucial to nurture your existing membership base and increase gym member retention.

Gym member retention is at the core of gym management. It's an ongoing process to keep members engaged, paying and preventing member churn. Here are 10 strategies you can use to increase gym member retention, increase revenue, and drive engagement.

1. THE BEST MEMBER ONBOARDING PROGRAM

Your lead has become a fully-fledged member. Now, it's time to solidify your relationship and provide them with all the information they need. Personalized onboarding can increase retention by 75%. The first few months of membership are crucial, so you want to get it right. Focus on creating the best member onboarding program. After all, this is one of the first impressions your member will have directly with you. Educate new members and reinforce that they have made the best decision by signing up for your gym. Give them the

opportunity to connect with other members in your gym community and track and measure their success. Remember to check-in frequently during the first six months so you can help out if needed.

2. CREATE A COMMUNITY

A gym community can do wonders for member retention. In a study, 36% of people who exercise prefer to exercise in groups or classes. Organizing events and workouts that encourage a sense of community is a fantastic place to start. Increase retention by encouraging members to compete against each other in competitions, and launch group training exercises and classes. Group training helps to fast track community building and help gym-goers to connect with one another. If you don't already offer group training, there are numerous reasons why you should start. Group training means you can offer affordable fitness instruction with high-quality instructors, increase motivation, and improve member retention.

3. SET REALISTIC GOALS AND SHOW PROGRESS

Setting unrealistic goals and not seeing results can be one of the top reasons a member quits the gym. Every member has a reason they joined the gym or a goal. Help them keep track of their milestones and track their progress. Whether they want to lose weight, build muscle or just improve their overall fitness, you can easily track these metrics and help clients to meet their goals

4. PERSONALIZE MEMBERS' EXPERIENCE

One way to make your members feel valued and appreciated is to personalize their experience. Make your members feel like they have been

personally taken care of. Personalization has a place in all areas of the business from your marketing to your customer service. Some brands have experienced an 8x improvement in their click-through rates when sending out a personalized video compared to their standard email marketing campaign. In order to deliver a meaningful and personalized experience, you need to know as much as you can about your members. This is where you can use your member data and audience research. By per-

sonalizing your members' experience, you can make them feel like a priority during every visit. This is perhaps one of the best strategies to take in order to retain members for longer.

5. ENCOURAGE FEEDBACK AND REVIEWS

Feedback and reviews serve multiple purposes. By encouraging regular feedback and reviews, you can find out if there's something your members aren't happy with. Maybe they want more class variety or there might be a problem with your facilities. Whatever the case may be, regular feedback gives you the chance to intervene at an early stage, fix the problems and increase member retention. Reviews are also a great way to show potential members and clients how great your gym is. Facebook and Google reviews are helpful for local SEO and raising brand awareness in your area. Reviews offer proof that your business, services or

products are worth investing in and help to build trust between you and your clients.

6. STAY IN TOUCH

It's important to stay in touch with your gym members. Communication can impact member retention. Strong communication can build solid relationships and boost your brand. Make sure to look after your existing members and show how much you appreciate them. When your existing members are happy, you will have a good membership base of which your business can grow from.

7. TARGET THE RIGHT PEOPLE AT THE RIGHT TIME

This strategy ties in with the previous point, communication. Staying in touch with members is essential but, staying in touch with the right members at the right time can go along way in terms of retaining members. By encompassing a few different elements like personalization, communication, feedback, and tracking attendance, you can pinpoint the people on the verge of quitting. A simple personalized message sent at the right time could be the difference between a member quitting and staying. Perhaps they aren't feeling motivated or have had a couple of cheat days and missed their regular Wednesday HIIT class. This is your chance to offer a free personal training session or workout program to get them back on track and hitting targets.

8. KEEP TRACK OF MEMBER ATTEND-

ANCE

One way to keep on top of retention is to watch member attendance. Scrutinize your weekly attendance so you can step in if needed. One of the first signs a member is thinking about leaving is poor weekly attendance. If you have a regular gym-goer that's always at the gym at least three times a week and all of a sudden you haven't seen them for two weeks, it's time to check-in. Use member attendance to identify high-risk members. Have strategies in place to contact low-attendance members and reduce the risk of churn. Try offering discounted personal training sessions or workout programs designed to get members motivated and focused on their fitness. The key to implementing the right strategy is being able to access attendance data easily.

9. MAKE IT EASY TO MANAGE MEMBER-SHIPS

Anything that is complicated and difficult to use can affect member retention. Membership management software allows your business to manage members, marketing, and organize events. Your gym management software should make it easy for members to manage their own memberships. It should be simple to book classes, manage membership renewal, and pay for any services you offer.

10. SHOW PERSONALITY

Although you're running a business, you're constantly interacting with

people. Members want to interact with a person who cares about them. Websites tend to be formal with a well-crafted call to action. One way to showcase personality is through blogs and social profiles. This provides a great opportunity to show off your brand's personality. Personality can help to keep members loyal while creating meaningful connections. Use your marketing channels to spread your values, talk about what motivates you and drives your passion. When you speak to your members online, use the same language that you would use if you were talking in real life. You want members to feel like there is a genuine connection between you.

FACTS OR FICTION

The common reason that members quit the gym are : unrealistic goals, not held accountable and no engagement.

If you find this information correct or false, email us with FACT or FICTION to (magazine@fctsa-cademy.com) and receive %10 discount on the upcoming CFM (certified facility manager) course from FACTS.

HEALTH AND FITNESS INDUSTRY OVERVIEW IN MENA REGION

What you need to know about the middle east and global market

Introduction

The health needs of people are constantly changing, and this has led to the rise in the demand of the Health and Wellness market at the global level. In present times, the global health and wellness industry is worth USD 4.2 trillion. However, The global health and fitness club market is projected to grow at the rate of 10.6% during the forecast period 2018 to 2023. Based on the consistent expansion of the market, demands are always increasing on the health and fitness associates, partners and facilities. Today, people are willing to spend more amount of money on improving their health and well-being. Some of the key sectors that exist in the prosper-

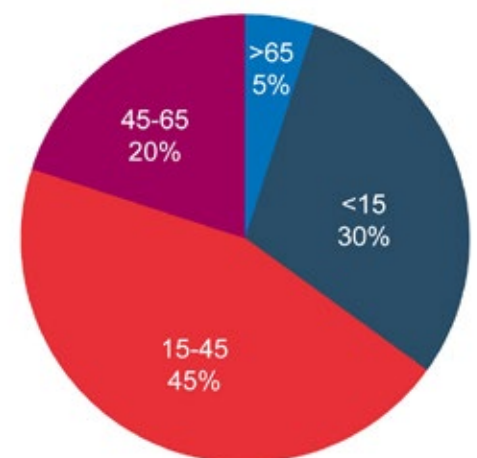

ous Health and Wellness industry include healthy eating and nutrition, personal care and beauty, fitness and mind-body, workplace wellness, and many more. All these sectors have contributed to the overall growth

and expansion of the entire industry. Based on findings gathered by The

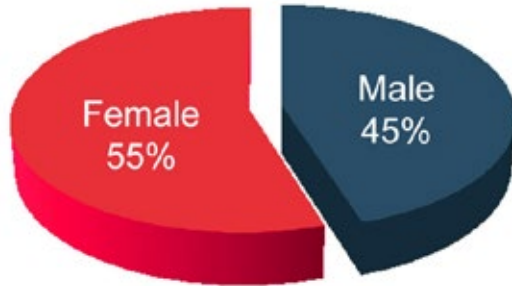

FACTS Academy2020, approximately 9 million members utilize 13,478 health clubs in 10 markets in the Middle East and North Africa. These 10

population age groups

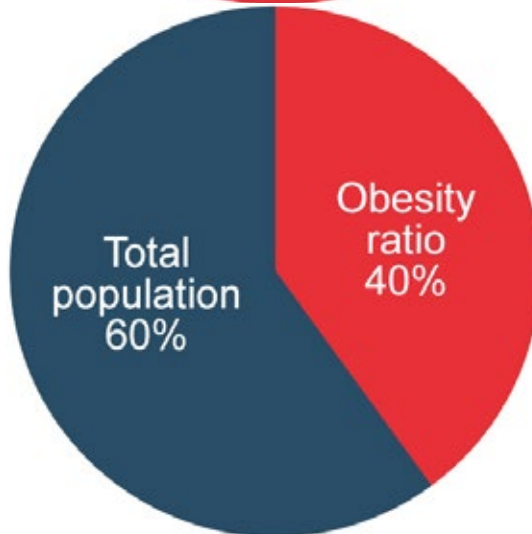

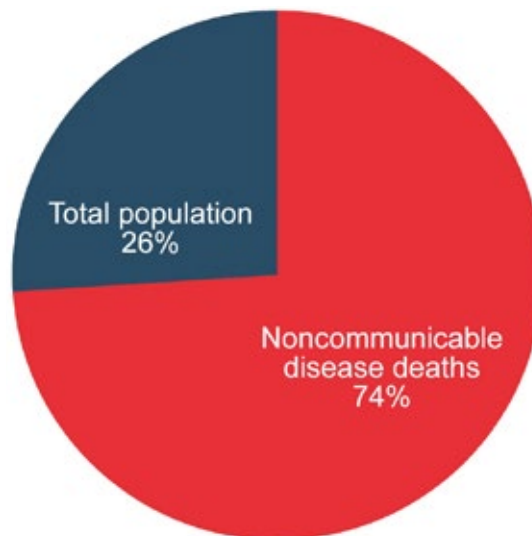

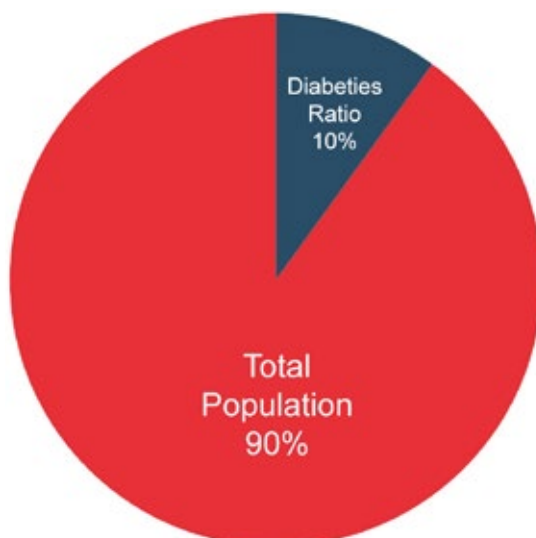

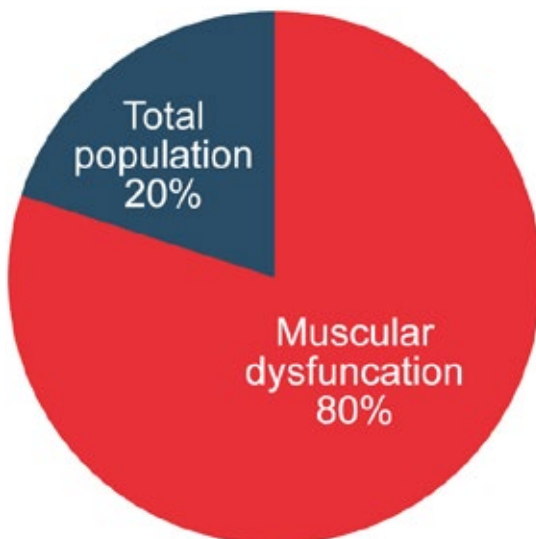

markets collectively generate roughly \$2.1 billion in industry revenue. Saudi Arabia leads all markets in this re-

gion in revenue with approximately \$1.2 billion generated at 1,574 health clubs, which attract more than 1.5 million members. In terms of club count, Egypt leads all MENA markets with 7100 facilities. Despite conflicts in several MENA countries, there is a demand for fitness as consumers

seek to exercise and reap the benefits of an active lifestyle. Successful international fitness operators, including Fitness First, Gold's Gym, and World's Gym, have expanded into the Middle East. Fitness Time, based in Saudi Arabia, has more than 160 facilities in

the Middle East, highlighting the opportunity in this region. The outlook of the health club industry is bright and promising. As leading economies continue to improve, the industry is expected to thrive in the global marketplace, serving consumers with a variety of health and fitness needs. Offering access to fitness amenities, instructors, trainers, and coaches, club operators are well-positioned to lead a healthier world.

MENA population overview

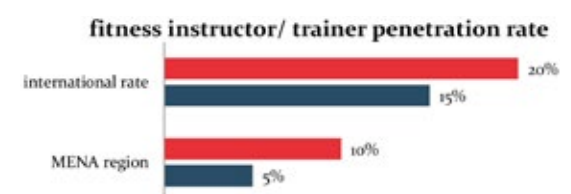

The Demographics of the Middle East and North Africa (MENA) region show a highly populated, culturally diverse region spanning three continents. As of 2018, the population was nearly 578 million. The most populous country in the MENA region is Egypt with nearly 100 million people, accounting for approximately 17% of the total. The MENA region is characterized with a young average population age. The median age across the MENA region is 26.8 years old. The younger generation is growing, creating an age bulge and high rates of youth looking for better life, health and career. Which creates an available work

force for the fitness industry to use with big potentials and enthusiasm for growth?

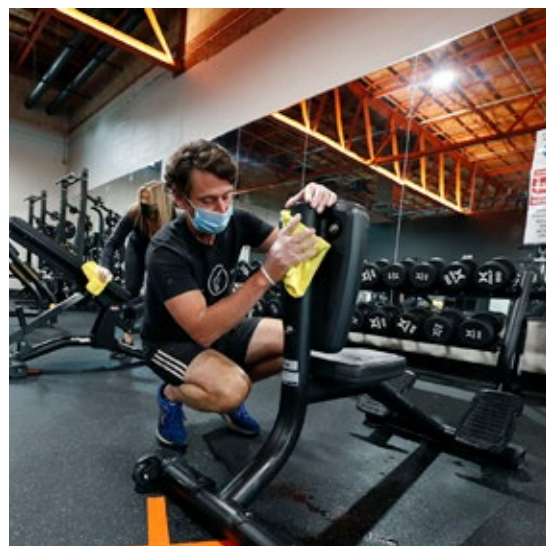

Health overview in MENA region

In the past several decades, countries in the Middle East and North Africa

have made significant improvements in developing their health systems

and improving the health status of their populations. However, the region continues to face substantial and diverse political, economic, social, and health challenges, a rise in the burden of noncommunicable diseases, ongoing conflicts in several countries, and refugee crises , creat-

ing bigger challenges for the region to overcome and a necessity for fitness orientation on a bigger scale . noncommunicable diseases accounts for approximately 74% death yearly, obesity ratio around 40% , 80% of the population suffers from muscular dys-

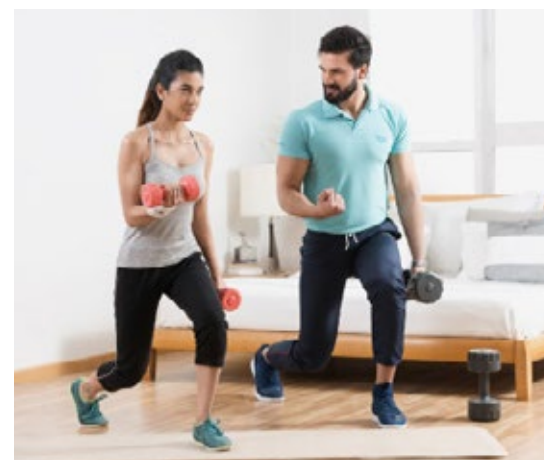

function and about 10% are diabetics.

Fitness industry work-force in MENA region

Due to the fast movement toward a healthier lifestyle and the increased awareness of the Arab community by the importance of living actively to fight against the health risks in our region, the demand on the fitness professionals increased and shortage in the workforce is found , which creates a lot of chances for our youth population to hunt for opportunities and use the advantage of this expansion to achieve their goals either as a fitness professionals , marketing&sales specialists, operating managers, nutritionists, Spa specialist .. etc. FACTS Academy research team on the MENA workforce in the fitness industry found that:

- there're about 100,000 Fitness industry (in-house) workforce(including gym management, Fitness trainers ,sales and front desk, House keeping, IT, accountants ...etc.)
- the ratio between the fitness train-

ers/instructors and the supporting professionals is about 50% to 50%

- 50,000 Trainers/ instructor serving 20 million, so the ratio is around (0.0025%) which (1:400) (1 free trainer to 400 member, compared to ACSM bench mark (1%) (1:100)
- Personal training penetration rate is 5-10 % compared to International rate of 15 -20 % Trainers utilization hours in MENA are 25H per week/100 per month Compared to 50H per week/ 200 per month
- Personal trainers who provide one to one training and small group fitness training form an integral part of the industry, experiencing annual growth

MENA region health and fitness industry total market scope and size by country 2020

	Population	Total industry revenue	Total number of clubs	Total number of members	Penetration rate %	Annual income (with the country's national currency)
Saudi Arabia	34,218,169	1,185,659,090	1574	1,539,817	4.5	180,000 SAR
United Arab Emirates(UAE)	9,599,353	393,755,538	854	542,363	5.65	70,500 AED

PHYSICAL ACTIVITY MARKET GROWTH PROJECTION IN MENA region 2020-2025

The projected physical activity market includes a broad spectrum of services and products such as wearable products, equipment, fitness and nutrition apps, food products and dietary supplements..etc therefore the physical activity market is not exclusively represent the clubs/classes/ gym memberships or personal training fees. Over the last decade, health and fitness industry around the world has observed rapidly rising interest in all kinds of wellness-related behaviors and lifestyles, accompanied by accelerating consumer spending. This growth is evident in the global explosion of fitness, gyms, and health clubs in countries around the world, as well as the rapid proliferation of yoga and

other mindful movement modalities. There is no sign that this movement is slowing down, as a wellness-mind-

set continues to permeate the global consumer consciousness, affecting people's daily routines, decision-mak-

ing, and spending habits. despite of the robust physical activity market growth and increasing the consumer spending on physical activity , it doesn't mean our MENA region's problem of inactivity will be solved, From a public health perspective, the aim is simply to get more people more active, more often – regardless of whether they spend more money while doing so on the latest fitness fads, gadgets, and apparel .Hereby comes the increasing demands on the health and fitness workforce to increase the fitness awareness and engage the MENA.

Worldwide survey for top 10 fitness trends 2020 by ACSM's Health and Fitness Journal Top 10 Worldwide Fitness Trends for 2021 according to ACSM Worldwide Survey

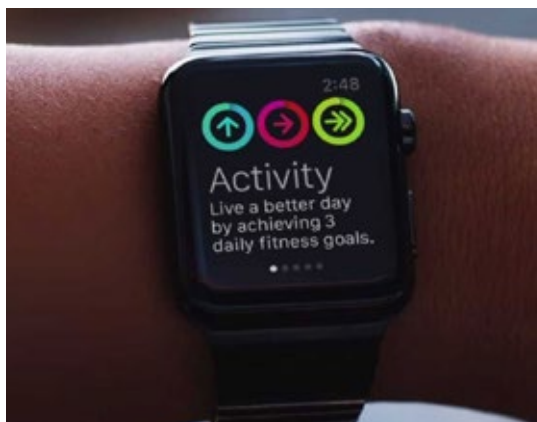

1. Online training. The big changes within the health fitness industry as a result of the COVID-19 pandemic resulted in the temporary closure of clubs around the world forcing innovative delivery of classes. The challenges of engaging clients at a

distance resulted in the use of some very strategic delivery systems. Online training was developed for the at-home exercise experience. This trend uses digital streaming technology to deliver group, individual, or instructional exercise programs online. On-

line training is available 24/7 and can be a live class (live streaming workouts) or prerecorded.

2. Wearable technology. Wearable technology was the no. 1 trend since it was first introduced on the survey in 2016 (the only exception was a drop to no. 3 in 2018) and includes fitness trackers, smart watches, heart rate monitors, and GPS tracking devices.

Examples include fitness and activity trackers like those manufactured by Fitbit®, Samsung Gear Fit2®, Misfit®, Garmin®, and Apple®. These devices can be used as a step counter and can track heart rate, body temperature, calories, sitting time, sleep time, and much more. Initially, there was some question of accuracy, but these issues have seemed to be resolved well enough that it has been estimated to

be about a U.S. \$100 billion industry. New innovations include blood pressure, oxygen saturation, and electrocardiogram.

3. Body weight training. Body weight training did not appear as a survey trend option before 2013 because it only became popular (as a defined trend) in gyms around the world within the last decade. Using a combination of variable resistance body weight training and neuromotor movements using multiple planes of movement, this program is all about using body weight as the

training modality. Body weight training uses minimal equipment, which makes it an inexpensive way to exercise effectively.

4. Outdoor activities. Perhaps because of the COVID-19 pandemic, more outdoor activities such as small group walks, group rides, or organized hiking groups have become popular. They can be short events, daylong events, or planned weeklong hiking excursions. Participants can

meet in a local park, hiking area, or on a bike trail typically with a designated

leader.

5. HIIT. These exercise programs typically involve short bursts of high-intensity bouts of exercise followed by a short period of rest. Although there are several commercial club examples of HIIT, all emphasize higher intensities (above 90%) of maximum during the increased intensity segments followed by periods of rest and recovery. Despite warnings by some fitness professionals of potentially increased injury rates using HIIT, this form of exercise has been popular in gyms all over the world.

6. Virtual training. This is the first time that virtual training has appeared separately from virtual online training. For the purpose of the survey, virtual training was defined as the fusion of group exercise with technology offering workouts designed for ease and convenience to suit schedules and needs. Typically, virtual workouts are played in gyms on the big screen attracting smaller number of clients compared with live classes while providing clients of all levels and ages with a different group fitness experience. Virtual classes are often a gateway for live group fitness classes. Virtual workouts typically at-

tract smaller numbers, and clients can go at their own pace, which makes it ideal if training a novice looking to learn the moves. As with online training, virtual training in the top 10 may

be an industry reaction to the COVID-19 pandemic.

7. Exercise is medicine. Exercise is medicine (EIM) is a global health initiative that focuses on encouraging primary care physicians and other health care providers to include physical activity assessment and associated treatment recommendations as part of every patient visit and referring their patients to exercise professionals. In addition, EIM recognizes fitness professionals as part of the health care team in their local communities.

8. Strength training with free weights. Previous surveys includ-

ed a category described as "strength training." Determined to be too broad a category, strength training was dropped in 2020 in favor of the more specific free weight training. Free

weights, barbells, kettlebells, dumbbells, and medicine ball classes do not just incorporate barbells into another functional class or activity. Instructors start by teaching proper form for each exercise and then progressively increase the resistance once the cor-

rect form is accomplished. A new exercise is added periodically, and those begin at the form or movement level.

9. Fitness programs for older adults. This trend continues to stress the fitness needs of the Baby Boom and older generations. These individuals in general have more discretionary money than their younger counterparts, and fitness clubs may be able to capitalize on this growing market. People are living longer, working longer, and remaining healthy and active well into their retirement from work.

10. Personal training. One-on-one training continues to be a strong trend as the profession of personal training becomes more accessible online, in health clubs, in the home, and in worksites that have fitness facilities. Personal training includes fitness testing and goal setting with the trainer working one-on-one with a client to prescribe workouts specific to their individual needs and goals. Since this survey was first published in 2006, personal training has been a top 10 trend.

THE INDOOR CYCLE THAT MOVES WITH YOU REALRYDER ABF8

THE ARTICULATING BIKE FRAME AND HANDLEBARS EXCLUSIVE TO THE REALRYDER INDOOR CYCLE ALLOW YOU TO LEAN, TURN, STEER AND BALANCE THROUGH THREE ESSENTIAL PLANES OF MOTION, BECOMING FULLY ENGAGED WITH THE BIKE, AND OVERALL RIDING EXPERIENCE. WHETHER YOU'RE A CYCLING NUT, FITNESS FREAK OR A FUNCTIONAL TRAINING JUNKIE, THE REALRYDER BIKE OFFERS SUPERIOR BIOMECHANICAL, PHYSIOLOGICAL AND EMOTIONAL BENEFITS OVER YOUR EVERYDAY STATIONARY BIKE.

HOW TO PERFORM CABLE TRUNK TWIST?

The cable trunk twist is a great exercise to add to any workout. This exercise is specifically designed to strengthen the abdominal and oblique muscles, but can also add muscle tone and increased strength to the muscles of the lower back. This is a great exercise for people who are looking for a new type of abdominal workout, are trying to recover from a lower back injury or are wanting to add definition to their oblique muscles.

TARGET MUSCLES:

The primary areas affected by torso rotation exercises are the rectus abdominus or abs, transverse abdominus, and obliques. Secondary muscles groups affected are stabilizers such as the rhomboids, deltoids, glutes, abductors, quads and adductors.

ABCDEF SAFETY:

Alignment: In order to properly perform a cable trunk twist, you must first set up the equipment in the right manner. Find a high quality cable machine, and move one of the arms of the cable machine so that it is positioned at a height similar to that of your shoulders. Stand with your back to the cable machine, with your feet spaced one foot apart from each other and your toes pointing forward. Reach both arms over to one of the cable handles, for example the handle on the right side of your body. Your left arm should be extending across the front of your body, with both hands firmly holding the handle. Your torso should be twisted slightly, pointed in the direction of the cable handle. Take a few deep breaths. Look at your hands, and as you exhale, carefully twist your torso, keeping your arms straight and bringing

your body back into proper alignment. You should now be standing tall in front of the cable machine with your spine straight and your arms extended in front of your body, still holding onto the cable handle. Slowly twist back to the original position.

Breathing: Breath out while rotating your torso away from the cable machine, breath in while returning to the starting position.

Concentration: keep your back straight and avoid locking your knees to reduce the pressure on knee ligaments, contract your glute to stabilize the pelvic and concentrate that the movement is originated from the trunk area.

Duration: Perform this exercise 10 times before taking a short break, and then do another 2 sets. Perform 3 sets of 10 repetitions with the arms across the opposite side of the body.

Errors: swinging or jerking from side-to-side, knee lock, not fully extending your arms and not performing the full range of motion of trunk rotation.

Fluids: make sure to be hydrated before, during and after exercise.

FACTS OR FICTION

This is a great exercise for people who are looking for a new type of abdominal workout, are trying to recover from a lower back injury or are wanting to add definition to their oblique muscles.

If you find this information correct or false, email us with FACT or FICTION to (magazine@factsacademy.com) and receive %10 discount on the upcoming CFT (certified fitness trainer) course from FACTS.

It's About Thyme!

Thyme is an herb from the mint family that you probably recognize from your spice set. But it's so much more than an after-thought ingredient. Its range of use is impressive, and it has over 400 subspecies. Ancient Egyptians used it in their embalming practices, while ancient Greeks used it as incense. Thanks to its distinctive taste, thyme has remained a culinary staple to this day. But thyme is also fast gaining a reputation for its medicinal qualities, such as its ability to help treat acne and high blood pressure.

If you're tired of buying and trying over-the-counter acne medication with no good results, you may be in luck. Thyme is known for its antibacterial properties and it might have a future as an acne-fighting ingredient. When thyme is steeped in alcohol for days or weeks, it turns into a solution known as a tincture. Researchers in the U.K. have tested the effects of thyme tinctures on acne. In the one study done on thyme tincture, the findings were impressive. This natural herb preparation fought pimples better than antiacne products, which included benzoyl peroxide. Time will tell if this remedy is an effective acne treatment. Thyme to lower blood pressure, *Thymus linearis* Benth. is a species of thyme found in Pakistan and Afghanistan. A study found that an extract was able to significantly reduce heart rate in rats with high blood pressure, and it was also able to lower their cholesterol. One sure way to use thyme to help lower your heart rate is to substitute it for salt in your foods.

Thyme can stop coughing! Thyme essential oil, which is obtained from its leaves, is often used as a natural cough remedy. In one study, a combination of thyme and ivy leaves helped to alleviate coughing and other symptoms of acute

bronchitis. Next time you're faced with a cough or sore throat, try drinking some thyme tea.

Thyme help to boost your immunity, Getting all the vitamins your body needs every day can be challenging. Luckily, thyme is packed with vitamin C and is also a good source of vitamin A. If you feel a cold coming on, thyme can help get you back in good health. Another health benefit of thyme: It's a good source of copper, fiber, iron, and manganese.

Thyme to disinfect, Mold is a common yet potentially dangerous air pollutant that can lurk in your home. Once you identify it, take the necessary steps to get rid of it once and for all. Thyme oil may be the answer for low mold concentrations. Essential oil of thyme and thymol hold many fungicidal properties. Research suggests that it can be used as a disinfectant in dwellings where there is a low concentration of mold.

Thyme can get rid of pests, Thymol is also an ingredient in many pesticides — both outdoor and indoor — and is commonly used to target bacteria and viruses, as well as rats, mice, and other animal pests.

You can also make homemade repellent by mixing four drops of thyme oil

to every teaspoon of olive oil, or mixing five drops for every 2 ounces of water.

Thyme smells great, Organic and natural skin care products can now be found at most retailers, and many contain thyme. Thanks to its antiseptic and antifungal properties, it is a common ingredient in mouthwash.

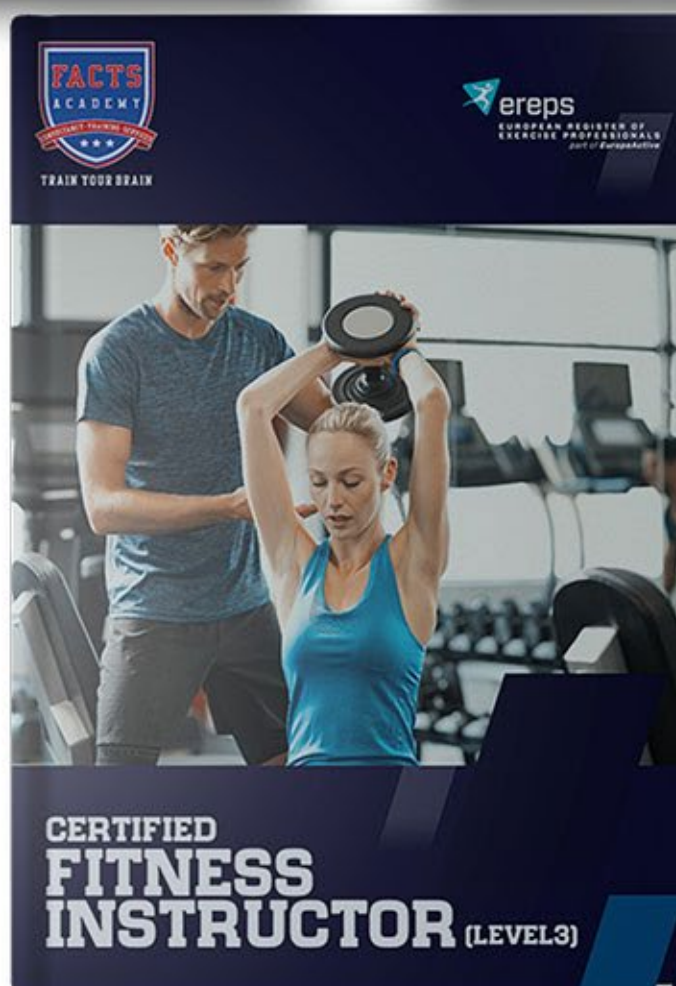

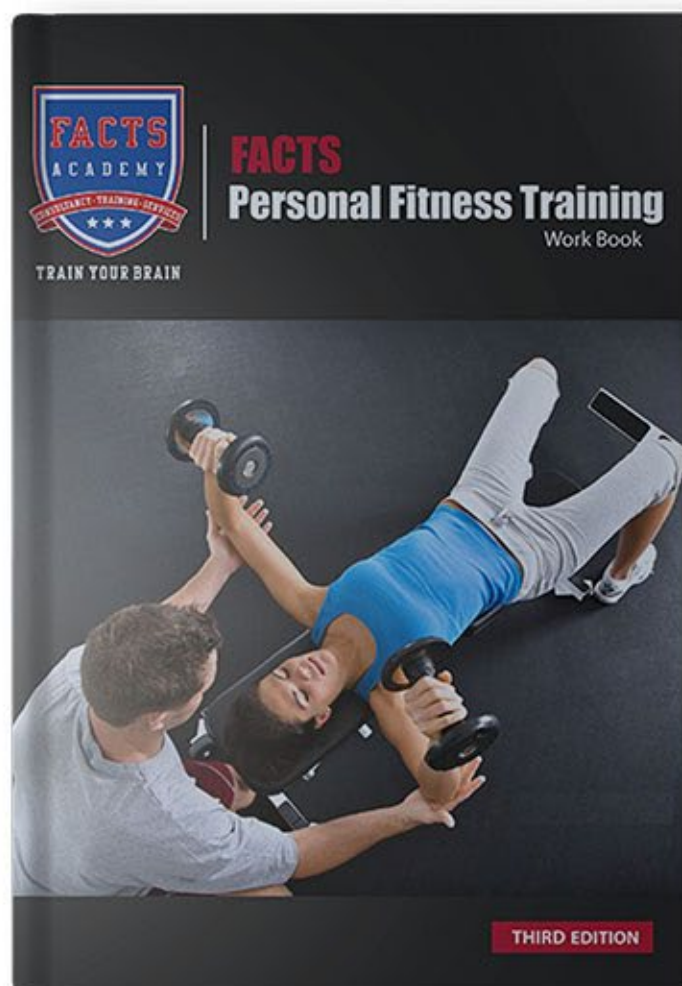

Thyme is a main ingredient in this cleansing take on pesto sauce, which you can use as a condiment or add to pasta or rice. Fresh leaves or whole sprigs can be used while preparing meat or poultry. Thyme is also an excellent ingredient to use with fish, like in this heart-healthy white fish recipes, it's a great way to add some thyme to your diet.

FACTS OR FICTION

THYME CAN BE USED AS ANTI-ACNE TREATMENT.

If you find this information correct or false, email us with FACT or FICTION on (imagazine@factsacademy.com) and receive %10 discount on the upcoming CNS (certified nutrition specialist) course from FACTS.

TOKYO 2021: 122 EGYPTIAN ATHLETES HERE FOR THE GOLD

After being postponed due to covid last year, Tokyo 2020 is now Tokyo 2021 and it's almost here. The Tokyo 2021 Olympic Games will feature a record 33 competitions and 339 events held across 42 competition venues. Egypt is participating with a whopping 122 athletes including Haydy Morsy(modern pentathlon), Ahmed el Gendy(modern pentathlon), Samar Hamza(wrestling), Azmy Mehelba(skeet shooting), Feryal Ashraf(karate), Giana Farouk(karate), Hania Moro(Swimming), Farida Osman(swimming), Aya Ayman Abbas(paralympic swimming), and Eslam Abuali(paralympic swimming).

IL BOSCO: NEW CAPITAL'S FIRST-EVER RUNNING EVENT

Over 1000 participants came together from all over Egypt on the 11th of June to take part in Cairo Runners' IL Bosco 10k Race! The event featured 3 different races: The 10k race, the 5k race, and the 1k family run.

Madinaty Half Marathon: 2021's Biggest Race

Madinaty Half Marathon, 2021's Biggest Race, was organized by The Tri Factory as well as Talaat Mostafa Group. The event featured 3 different races: 5K, 10K, and 21K! The Green atmosphere of Madinaty and the fresh air is what made this run extra special!

AL AHLY REACH CAF CHAMPIONS LEAGUE FINAL

Al Ahly defeated Esperance of Tunisia 3-0 on Saturday night, securing a spot in the CAF Champions League final after winning the semi-final tie 4-0 on aggregate.

ZAMALEK DEFEAT AL AHLY 3-2 TO WIN THE EGYPTIAN CUP TITLE

Zamalek won the Egyptian Volleyball Cup title for the first time since 2015 after defeating Al Ahly 3-2 on Friday night at Suez Canal Authority hall. The White Knights took their revenge after losing the league title to Al Ahly in the last game of the season.

Wimbledon: Serena Williams retires injured from first round match

American legend Serena Williams's dreams of winning an eighth Wimbledon singles title and equalling Margaret Court's Grand Slam record of 24 ended in tears on Tuesday as further doubt was cast on her future in the sport. The 39-year-old was leading 3-1 in the first set of her first round match against Aliaksandra Sasnovich of Belarus when she slipped and had to have her left ankle examined. Williams returned from receiving medical attention but called it a day at 3-3 and walked off Centre Court in tears.

BRITISH OLYMPIC TRIALS: DINA ASHER-SMITH CLAIMS TOKYO 100M SPOT

Dina Asher-Smith booked her 100m spot at the Tokyo Olympics but was denied a new British record when her run, initially timed at 10.71 seconds, was revised to 10.97. The British Championships crowd in Manchester, who thought they had seen a historic performance, groaned as Asher-Smith's time was corrected.

Abu Dhabi gears up for Fina World Swimming Championships

Abu Dhabi Sports Council has revealed the latest developments and preparations for hosting the Fina World Swimming Championships (25m) at Yas Island's Etihad Arena from December 16-21, along with the In an announcement at Emirates Palace on Tuesday, two wildcard entrants who will represent the UAE at the championships were revealed — Youssef Al Matrooshi, 18, and Layla Al Khatib, international swimmers at such an event.

Saudi Sports for All Federation partners with Arabian Centers Co. to turn malls into walking destinations

The Saudi Sports for All Federation (SFA) has signed a memorandum of understanding with the Arabian Centers Co. to turn their malls into walking destinations for visitors in their latest initiative to promote a healthier lifestyle in the Kingdom. The agreement will see the SFA host a program of walking events and campaigns at Arabian Centers malls across Saudi Arabia, helping turn the shopping venues into hubs of health and wellbeing for the 109 million annual visitors the malls attract every year.

BRITISH-PAKISTANI BOXER FIGHTS FOR EQUALITY IN THE RING

British-Pakistani boxer Haseebah Abdullah was recognized last month as a "Hometown Hero" by the Birmingham 2022 Commonwealth Games for her "huge role in making the sport more inclusive" as England's first hijab-wearing boxing coach. Now her goal is to bring equality across the sporting industry.

Tour de France 2021: Julian Alaphilippe wins crash-marred first stage

World champion Julian Alaphilippe won the crash-marred opening stage of the Tour de France to snatch the race leader's yellow jersey on Saturday. Alaphilippe surged ahead of the main pack in the final steep climb leading to the finish in Landerneau.

T20 WORLD CUP MOVED TO UAE AND OMAN, ICC CONFIRMS

The Twenty20 World Cup has been shifted to the United Arab Emirates and Oman due to the coronavirus situation in India, cricket's world body confirmed on Tuesday. The tournament was originally meant to happen in India but the country is emerging from a Covid-19 surge in April and May and experts fear a new wave of cases later this year.
