FOREWORD

Nutrition is a key universal factor which affects health of all human being throughout the entire life course. However, globally, malnutrition is a major health problem of human race and the role of nutrition in control of disease is well recognized.

The National Nutrition Institute has a leading and important role in identify national nutritional problems and setting the country's strategies for combating such problems. The accelerated economic development of the country brings about qualitative changes in the production, processing, distribution and marketing of foods. Increasing urbanization also has consequences for changes in food habits, dietary patterns and lifestyle. On the other hand, lack of nutrition knowledge and awareness of the significances of certain dietary constituents are contributing factors of malnutrition among certain sectors of the population. All these factors and changes have led to the need for new edition of food composition tables.

This publication will be a vital guide to all those who could contribute to people's nutritional wellbeing: food producers and manufacturers, officials in ministries of agriculture, industry, trade and health and individuals in positions that entail decision-making on food such as caterers, hospital administrators and food importers and retailers.

We support all efforts made by the National Nutrition Institute for updating and disseminating such important nutritional knowledge to the country at large.

**Secretary General,
General Organization for
Teaching Hospitals and Institutes**

Dr. Abdel Hameed Abaza

PREFACE AND ACKNOWLEDGEMENT

The first food composition table was compiled and issued as a mimeographed document in the fifties by Dr. Ismail Abdou the founder of the Nutrition Institute. Food analysis and updating the mimeograph data was continued and in 1996 the first edition on "Food Composition Tables for Egypt" was published. After ten years, this second edition was prepared based on intensive review of the first edition and laboratory analysis and compilation of all available data at the National Nutrition Institute. The publication includes wider range of food items than first edition: raw, processed, cooked foods, snacks, as well as fast foods served by catering establishments and/or vendors.

The National Nutrition Institute is indebted to the founder of food composition tables' program analysis and to all keen former Institutes' Directors for continuous efforts in the program. Acknowledgement is extended to the Food Science Department for bringing this publication to its current state. Enthusiastic efforts and supports of the Senior Staff of the department are well recognized in technical revision, data verification and data compilation. Special acknowledgements goes to all former and present staff of Food Science Department since 1996, for their sincere efforts made starting from food sampling, preparation, and chemical analysis. Moreover, the contribution and positive inputs from all different departments of the Institute is highly appreciated. Very special thanks and gratitude to Prof. Dr. Nafissa Eid former Head of Food Science Department of the National Nutrition Institute whose dedication, leadership, extensive work and commitment has led to this fine scientific work and made this publication possible.

Finally, the National Nutrition Institute is proud to make this valuable food nutrients output information available in printed form using its own technical and professional resources without external funds. The Institute anticipates periodic revision and updating of these tables in the future to keep in abreast of the new advances in methods of food analysis to include more nutrients and to expand for new food items.

We hope that this publication will be a useful tool to nutritionists, physicians, dieticians, food scientists and to all food, nutrition and health concerned parties.

Director, National Nutrition Institute

Dr. Azza S. Gohar

INTRODUCTION

Food composition tables are considered an essential tool for food, nutrition, and health related areas. An agricultural planning for food production policy has always relied on knowledge about the nutritional value of foods. The global nature of food processing and the expansion of world food trade has directed the attention for food composition data for labeling, regulatory, and other purposes related to food trade and exchange. The importance of food composition tables has been well recognized for many nutritional activities; evaluating the adequacy of diet through food consumption surveys of communities; investigating diet/health relationships; setting dietary targets and nutrition policies; planning individual and institutional diets; and it is an essential tool for nutrition education programs. Moreover, food composition information is receiving more attention by the medical profession, for dietary planning and advising on therapeutic diets.

National Nutrition Institute, Cairo, Egypt, has published the first edition of "Food Composition Tables for Egypt" in 1996. It includes data on energy, proximate composition, eight minerals and four vitamins; for 252 food items (mainly raw food items in section one and limited number of cooked composite dishes in section two). However, updating the existing food composition tables is needed as continuous process due many changes observed in food chain system. Changes in unprocessed foods (new cultivars or breeds; new farming practices etc.), new or re-formulated food products are introduced to the food system (fast foods, beverages, cereal products; confectionery; dairy products). Moreover, composition information of mixed cooked dishes, ready made foods and traditional foods are limited.

This publication is the result of continuous efforts carried out at the National Nutrition Institute over the past ten years, and the data is generated from research program on food composition tables, linked with ongoing food control system activities such as "Nutrition Facts Labeling" analysis program. The food composition database is the outcome of intensive review and revisions for the available data; compilation of all chemical analysis for food items (new and previously analyzed) to consider the most recent findings of nutrients content in foods. The publication includes the same number of nutrients in the first edition, but included more of food items bringing up the total number of food items to 470 arranged in fifteen food groups. The major new items are: biscuits, bread, sweets and confectionary, oriental foods, pizza, sandwiches, snacks, and cooked foods. In order to facilitate the use of the tables, in each group related foods are listed together (raw, processed and cooked forms). Also the publication includes Annex which gives information on food items according to the sequence order in the tables. The information's are the English name of food item; common Arabic names; and brief description of food item.

It is hoped that the food composition database in this publication would meet the needs and uses of the food composition tables in Egypt. Nevertheless, plan is presently underway to expand food analysis program to include more of nutrients and food items for updating of national food composition tables.

EXAMINATION OF DATA AND NEW FOOD ITEMS

All the data values of the first edition were examined in relation to available published data for comparable foods. The examination of raw food items (in section one) showed that large amount of the material in the first edition was still valid. However, the review has identified which of the published values should be checked and updated by analysis of new samples. Complete revision of all composite cooked dishes (in section two) were made based on calculations from recipes, and some items needed to be prepared and checked by analysis. With respect to nutrient values of the first edition, the total carbohydrate was calculated by difference (crude fiber was not included). Vitamin A value was reported in terms of international unit (IU) while the value in microgram retinol equivalent ($\mu\text{g RE}$) is currently recommended and used.

The selection of new foods for inclusion was based on the views and thought of nutrition workers, dietitians, and food scientist. The number of food items selected was those of importance in the national diet according to food consumption surveys carried out by the Institute. More of raw items were suggested those where no data are available or the new introduced items in the market. The manufactured and processed food items were restricted to those with an established and stable composition (has standard and specifications). Some food items which form an important part of the diets of population segments have also been included such as fast and tradition types of foods commonly found in the market.

SAMPLING AND PREPARATION OF FOODS

Raw food items: For check and update values of raw food items, two samples were used per each item, while for new items at least five samples were pooled in one sample (equal size units, edible portion) for each item were considered. All samples were purchased from range of market outlets mainly from Metropolitan cities. The preparation of the sample include determination of food refuse (non edible portion) as percent (%) of total raw food; then the edible portion for food item was homogenized (blend/ground/powder) for chemical analysis.

Processed food items: Samples for processed food items were based on samples provided to the National Nutrition Institute for Nutrition Facts labeling program analysis. For each food item, at least three to six brand names samples were considered and each sample was prepared separately (blend/ground) for chemical analysis. The main ingredients of processed food items are presented in the Annex.

Cooked composite food/dish items: Recipes of composite dishes were obtained from dietary data of various field surveys carried out by the National Nutrition Institute and compared with recipes of cook books in order to come-up with a relatively representative recipe for each dish. The composite dishes were prepared from raw ingredients (according to the recipe) and cooked twice in the experimental kitchen under the supervision of dietitians. Sample of cooked food was homogenized and prepared for analysis. Cook recipe (ingredients weight in grams) is presented in the Annex.

Fast foods, ready made food and bakery food items: Food items recently introduced in catering establishments (pizza, sandwiches & snacks), major common bakery products and some oriental foods were purchased from different local outlets or vendors. For each food items at least five up to fifteen samples were considered, and each individual sample was prepared separately (ground/blend) for chemical analysis. The component (main ingredients) of each food item was recorded and presented in the Annex.

METHODS OF ANALYSIS

The standard official analytical procedures of the AOAC (1990) were used to determine nutrient contents in foods, with the following brief notes.

- **Water:** Water (moisture) content in gram (g) was determined using an air draft oven for most food items, while under vacuum oven was used for food items high in sugar content.
- **Protein:** Crude protein content in gram (g) was calculated from the total nitrogen values (determined by Kjeldahl method) by the use of conversion factors recommended for different food groups.
- **Fat:** Total lipid content in gram (g) was determined by Soxhlet procedure and Werner Schmidt method, which involve acid hydrolysis followed by extraction of fat with organic solvent.
- **Ash:** Dry ash content in gram (g) was determined using muffle furnace at 550 C.
- **Fiber:** Crude fiber content in gram (g) was determined as residue after acid digestion followed by alkali digestion.
- **Carbohydrate:** Carbohydrate content in gram (g) was calculated by difference.

$$\text{Carbohydrates (g)} = 100 - (\text{moisture} + \text{protein} + \text{fat} + \text{ash} + \text{crude fiber})$$

- **Energy:** Food energy values were calculated in kilocalories (Kcal), by multiplying the protein, fat and carbohydrate contents by the factors 4, 9 and 4, respectively.

- **Minerals Analysis:** Minerals content (sodium, potassium, calcium, magnesium, iron, zinc and copper) were determined using atomic absorption spectrometry (Pye Unicam model SP 192 instruments). Phosphorous content was determined by calorimetric method.
- **Vitamin A:** Vitamin A content in microgram retinol equivalent (ug RE) was determined spectrophotometrically for retinol and beta-carotene. The value for vitamin A = ug retinol + (ug beta-carotene/6).
- **Vitamin C:** Ascorbic acid and de-hydro ascorbic acid content in milligram (mg) was determined by titration method.
- **Thiamine (Vit. B1) and Riboflavin (Vit. B2):** Vitamins B1 and B2 contents in milligram (mg) were determined chemically by fluorimetric methods.

TABLES ARRANGEMENT

Analytical Data:

The average analytical data are reported in tables according to the following arrangement/sequences.

- Food refuse (%) of raw food
- Proximate composition per 100 gram edible portion of foods: water (g); Energy (Kcal); protein (g); fat (g); ash (g); fiber (g); and carbohydrate (g);
- Minerals content in milligram (mg) per 100 gram edible portion of foods: sodium; potassium; calcium; phosphorous; magnesium; iron; zinc and copper.
- Vitamins content per 100 gram edible portion of foods: Vitamin A (ug RE); Vitamin C (mg); thiamin (mg) and riboflavin (mg).

Symbols:

- (0) Zero indicates that none of the constituent is presents in the food.
- (T) Trace indicates that the amount of a constituent is presents, but is too small to measure and the value of zero may be use in data processing
- (-) Dash denotes that no analysis was performed

Food Items and Groups:

Food items are arranged in the following fifteen groups and in most cases listed among each group in alphabetical order to include all related forms (raw, processed and cooked):

- Cereals and Cereal-based Foods
- Bakery and Bakery-based Foods
- Tubers and Tuber-based Foods
- Legumes and Legumes-based Foods
- Nuts, Seeds and Products
- Vegetables and Vegetable-based Foods
- Fruits
- Sweets and Confectionary Products
- Meat, Poultry and Meat-based Foods
- Eggs
- Fish and Fish-based Foods
- Milk and Dairy Products
- Beverages, Drinks and Juices
- Condiments
- Miscellaneous

Annex:

The Annex (at the end) is designed to include more information on food items in the same table's order. The information presented is:

- The English name;
- The common Arabic name;
- The description of food item (type of food, main ingredients of processed and ready made food items, and recipe ingredients in gram of cooked items).

List of Food Items by English & Arabic Names and Food Description

No	English Name	Arabic Name	Description
CEREALS AND CEREAL-BASED FOODS			
1	Barley, grains	حبوب شعير	Raw, dry whole barley grains
2	Corn, grains (white)	حبوب ليرة بيضاء	Raw, dry whole white corn grains
3	Corn, grains (yellow)	حبوب ليرة صفراء	Raw, dry whole yellow corn grains
4	Corn, flakes	كروك شيكس	Processed, dry cornflakes: Yellow corn; sugar; flavors
5	Corn, flour	طحين ليرة	Dry, flour of milled white corn grains
6	Corn, kernels, canned	حبوب ليرة معلبة	Processed, canned corn kernels: sweet yellow corn kernels; salt; sugar; water (drained)
7	Corn, kernels on cob, grilled	كوز ليرة مشوي	Grilled, white corn kernels on cob
8	Corn, popped	شمار	Processed, popcorn: Popped/roasted yellow corn grains; vegetable oil; salt
9	Corn, puffed	كارناتو	Processed, extruded corn: Yellow corn grits; vegetable oil; salt; flavors
10	Corn, starch	نشادر	Dry, corn starch
11	Macaroni	مكرونة	Raw, dry macaroni
12	Macaroni/tomato, cooked	مكرونة بالصلصة	Cook recipe: Macaroni 500; fat 50; tomato 500; onion 100; salt 7; black pepper 2
13	Macaroni/tomato/meat, cooked	مكرونة بالصلصة و اللحم	Cook recipe: Macaroni 500; meat mince 250; fat 50; tomato 500; onion 100; salt 10; black pepper 2
14	Noodles, fried	شعيرية محمرة	Cook recipe: Noodles 400; fat 50; salt 5
15	Rice, grains (long)	حبوب ايل طويلة	Raw, dry white (polished) long grain rice
16	Rice, grains (short)	حبوب ايل قصيرة	Raw, dry white (polished) short grain rice

List of Food Items by English & Arabic Names and Food Description

No	English Name	Arabic Name	Description
17	Rice, flour	نخاع اري	Dry, milled polished rice grains
18	Rice, fried	ارز محمر	Cook recipe: Rice 750; fat 45; salt 10
19	Rice, fried with noodles	ارز محمر بالنخريه	Cook recipe: Rice 500; noodles 50; fat 50; salt 8
20	Rice, fried with onions	ارز محمر بالبصل	Cook recipe: Rice 650; onion 150; tomato 150; fat 60; salt 10; cumin 2; black pepper 2
21	Rice, fortified-baby food	ارز محمر تقويه الاطفال	Processed, dry baby food: milled polished rice; skim milk; sugar; vitamins and minerals mixture; flavors
22	Rice, (Koshari)	كشري	Cook recipe: Rice 400; mataroni 200; lentil 200; chickpeas 50; oil 90; tomato 1000; onion 250; garlic 50; salt 10; vinegar
23	Rice, (Koshari), market	كشري (السوق)	Market, Koshari ingredients: Rice; mataroni/noodles; lentil; chickpeas; tomato; chili; vinegar; garlic; onion; salt
24	Rice, pudding with milk	ارز بالبن	Cook recipe: Rice 150; milk 1000; corn starch 50; sugar 50; cinnamon
25	Rice, puffed/crisp	ارز كرسبي	Processed, dry extruded rice crisp: Rice flour; sugar; salt; malt extract
26	Semolina	سميد	Dry, milled wheat grains (hard variety)
27	Sorghum, grains	لرجه عريجه	Raw, dry whole sorghum grains
28	Wheat, bran	رند	Dry, wheat bran
29	Wheat, grains	حبوب قمح	Raw, dry whole wheat grains
30	Wheat, grains (Bella, canned)	بنليه قمح مطبخه	Processed canned Bella: Wheat grains; sugar; flavor; water
31	Wheat, flour (brown)	نخاع اسمر	Dry, milled wheat grains (brown flour extraction rate, 82%)
32	Wheat, flour (white)	نخاع ابيض	Dry, milled wheat grains (white flour extraction rate, 72%)
33	Wheat, fortified-baby food	نخاع قمح محمر تقويه الاطفال	Processed, dry baby food: milled wheat grains; skim milk; sugar; vitamins and minerals mixture; flavors

List of Food Items by English & Arabic Names and Food Description

No	English Name	Arabic Name	Description
34	Wheat, Koskos plain	كسكي	Steamed white wheat flour
35	Wheat, Koskos sweet	كسكي بالسكر	Koskos ingredients: Steamed wheat flour; sugar; fat; cinnamon
36	Wheat, parboiled (Burghul)	برغل	Raw, dry steamed wheat grains
37	Wheat, rubbed (Fereek)	فريك	Raw, dry rubbed green wheat grains
38	Wheat, rubbed, cooked	فريك مطهي	Cook recipe: Rubbed wheat 500; fat 45; onion 120; salt 7; black pepper 2
39	Wheat, rubbed/meat, cooked	فريك مطهي باللحم	Cook recipe: Rubbed wheat 500; meat 250; fat 30; onion 150; salt 8; black pepper 2
BAKERY AND BAKERY-BASED PRODUCTS			
1	Biscuit, chocolate coat	بسكوت مغلى بالشوكولاته	Processed, biscuits: Flour, sugar, skim milk, oil, ammonium & sodium bicarbonate, vanillin; chocolate coat
2	Biscuit, cream fill	بسكوت محشو كريمة	Processed, biscuits: Flour, sugar, skim milk, oil, ammonium & sodium bicarbonate, vanillin; filling (cream; sugar; flavors)
3	Biscuit, date fill	بسكوت محشو بلح	Processed, biscuits: Flour, sugar, skim milk, oil, ammonium & sodium bicarbonate, vanillin; filling (date paste; flavors)
4	Biscuit, digestive	بسكوت دايجستيف	Processed, biscuits: Flour, oat bran; sugar, oil, skim milk; baking powder; vanillin
5	Biscuit, nice	بسكوت نيس	Processed, biscuits: Flour, sugar, skim milk, oil, coconut, ammonium & sodium bicarbonate, vanillin
6	Biscuit, plain	بسكوت سادة	Processed, biscuits: Flour, sugar, oil, skim milk, baking powder, vanillin
7	Biscuit, plain (Fe-fortified)	بسكوت سادة مغل بالحديد	Processed, biscuits: Flour, sugar, oil, skim milk, baking powder, vanillin, ferrous sulfate (7.9mg/100g)
8	Biscuit, salted	بسكوت ملح (25)	Processed, biscuits: (white flour, oil, skim milk; egg; salt; ammonium & sodium bicarbonate)
9	Biscuit, salted (pretzel)	بسكوت ملح (براق)	Processed, biscuits: (white flour, malt extract, egg, salt; bicarbonate)
